DuoSet ELISA Development System Features

**Economical**
Available with sufficient reagents for either five or fifteen 96-well plates, DuoSet ELISA Development Systems are a cost-effective solution for performing multiple ELISAs.

**Optimized**
Carefully selected and titrated capture antibodies and detection antibodies, a mass-calibrated standard, and a detailed protocol reduce your preliminary development requirements.

**Flexible**
Capture and detection antibody concentrations can be adapted to suit multiple platforms.

**Versatile**
Biotinylated detection antibodies and the streptavidin-HRP conjugate enable a choice of chemiluminescent or colorimetric substrates.

**Extensive Analyte Selection**
R&D Systems offers over 750 DuoSet ELISA Development Systems with a selection of analytes that support a range of biological processes, including:

- cytokine and growth factor biology
- inflammation
- cancer biology
- angiogenesis
- apoptosis
- neuroscience
- nephrology
- cardiovascular biology
- obesity/diabetes
- bone metabolism

**Components**
- ELISA capture reagent
- biotinylated detection antibody
- streptavidin-HRP
- mass-calibrated standard
- detailed protocol

Highly Referenced
For 15 years, DuoSet ELISA Development Systems have been referenced in research literature. With over 25,000 product citations, our database makes it easy to view relevant references citing the use of DuoSet ELISA Development Systems. To simplify product selection, citations in our database include information on sample type and a direct link to the article.
Delivers Outstanding Quality and Performance

In-house manufacturing and stringent quality-control standards ensure the highest levels of performance and consistency.

Carefully Selected Antibody Pairs

The capture and detection antibodies are carefully selected to ensure their flawless performance as a sandwich ELISA antibody pair. Antibodies are chosen for their specific recognition of target analytes and lack of non-specific analyte detection. Carefully titrated, the antibodies reflect the best concentrations for high top standard Optical Density (O.D.) and low background O.D. signals.

Confirmed Lot-to-Lot Consistency

All lots are tested to ensure low background, a linear standard curve, consistent assay sensitivity, and a broad dynamic standard curve range. Consistent standard curve O.D.s and control values ensure that sample data is comparable over time.

Specific Detection of Recombinant and Natural Human IL-6. The detection antibody from the Human IL-6 DuoSet ELISA Development System (Catalog # DY206) was used to detect recombinant human (rh) IL-6 standard (lane 1), in human monocytes treated with Okadaic Acid (OA; lane 2), wild-type (WT) HEK293 cells (lane 3), or IL-6-transfected HEK293 cells (lane 4) by Western blotting. The detection antibody specifically recognized recombinant, natural, and exogenously expressed human IL-6.

Accurate Detection of Natural Proteins

Antibody pairs recognize the supplied recombinant standard and the natural proteins in biological samples in a parallel manner, confirming that this kit can be used to measure the relative mass values of the natural analyte. R&D Systems has determined the ideal standard curve range for each assay, ensuring peak sensitivity and reproducibility of results.

High Specificity

Assays are tested for cross-reactivity and interference with a panel of analyte-related molecules, ensuring their specific and accurate detection of the target analyte.
R&D Systems
Full Line of ELISA Development Systems

R&D Systems offers a variety of ELISA Development Systems that contain the essential components required to develop an immunoassay to measure the concentrations of secreted, intracellular, and phosphorylated proteins.

**DuoSet ELISA Development Systems**
A format for sandwich ELISA development

**DuoSet IC (Intracellular) ELISA Development Systems**
A format for measuring intracellular molecules in cell lysates by sandwich ELISA

**DuoSet IC (Intracellular) Phospho-specific ELISA Development Systems**
A format for measuring phosphorylated intracellular molecules in cell lysates by sandwich ELISA

**DuoSet Ancillary Kits**
The perfect complement to the 5-plate DuoSet ELISA Development System, DuoSet Ancillary Kits provide a comprehensive collection of reagents and plates to perform five 96-well assays.

Choose from three Ancillary Kits:

<table>

</tbody>
</table>

* To identify the appropriate Reagent Diluent, please consult the online product datasheet for your DuoSet ELISA Development System of interest. Each analyte presents varying requirements. Numbering of the Ancillary Kits reflect Reagent Diluent provided. Datasheets available on RnDSystems.com.

**Supplemental ELISA Products**
For maximum flexibility, stand-alone ELISA development products are available in larger pack sizes.
