Myeloid-derived Suppressor Cells

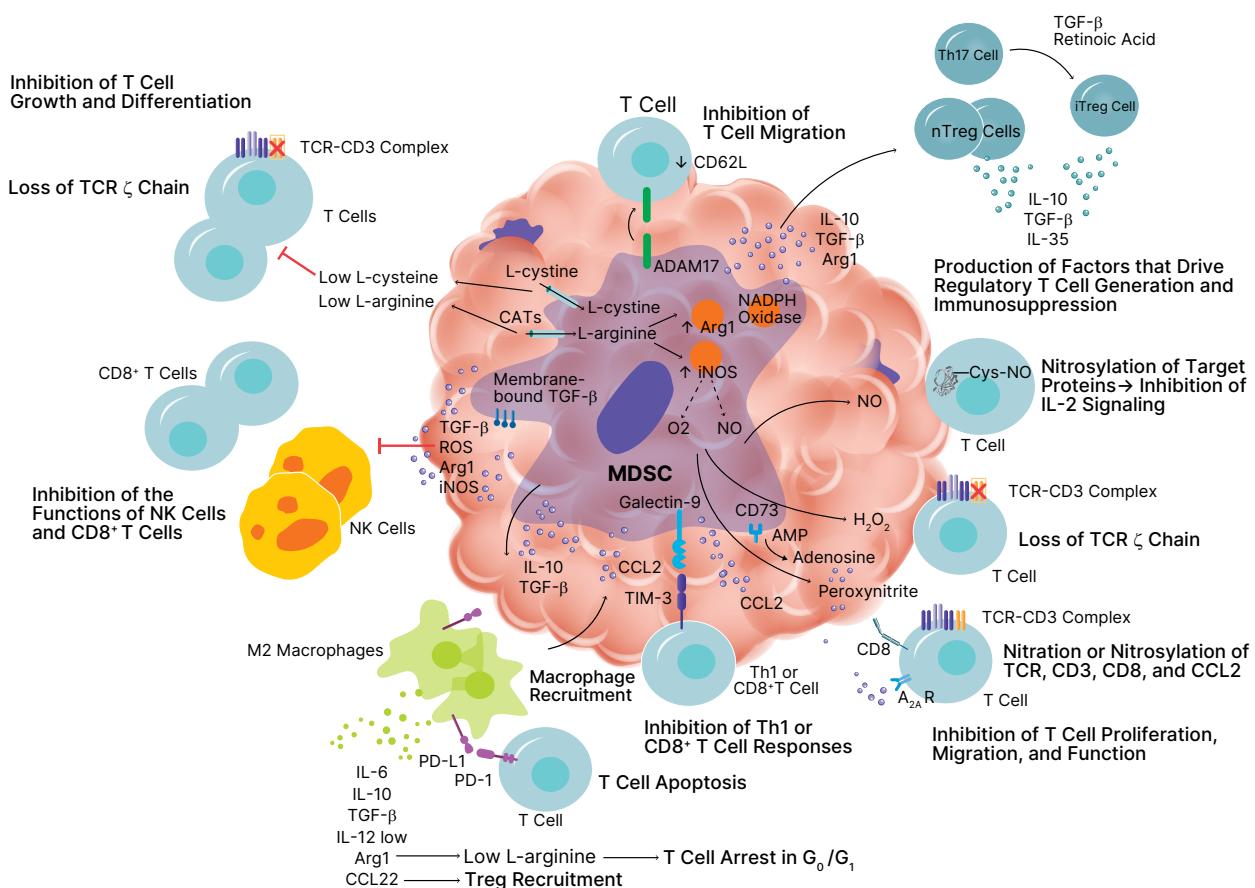

Myeloid-derived Suppressor Cells

Myeloid-derived suppressor cells (MDSCs) are a heterogeneous population of immature myeloid progenitor cells that fail to differentiate into granulocytes, macrophages, or dendritic cells. These immature cells have the capacity to suppress immune responses mediated by natural killer cells, CD8⁺ and CD4⁺ T cells. MDSCs accumulate in the blood, bone marrow, and secondary lymphoid organs of tumor-bearing mice and cancer patients, where circulating levels of MDSCs have been shown to correlate with clinical stage, metastatic burden, and chemoresistance. As a result, these cells have been suggested to have a causative role in promoting tumor-associated immunosuppression. In mouse, MDSCs are broadly defined as CD11b⁺ Gr-1⁺ cells, but the relative expression levels of Ly-6G and Ly-6C define two specific subsets known as granulocytic and monocytic MDSCs. Mouse granulocytic MDSCs are CD11b⁺ Gr-1/Ly-6G^{high} Ly-6C^{low}, while monocytic MDSCs are CD11b⁺ Gr-1/Ly-6G^{-/low} Ly-6C^{high}. Human MDSCs also commonly express CD11b along with Siglec-3/CD33 and lack HLA-DR and the lineage markers CD3, CD14, CD19, and CD56. Similar to mouse, human granulocytic (Lin- CD11b⁺ CD14⁻ CD15⁻ CD33⁺ CD66b⁺ HLA-DR⁻) and monocytic (Lin- CD11b⁺ CD14⁺ CD15⁻ CD33⁺ CD66b⁻ HLA-DR⁻) subsets have been identified, but they are based on the differential expression of CD14, CD15, and CD66b/CEACAM-8.

MDSCs are of great interest due to their immunosuppressive properties. While the mechanism by which MDSCs inhibit NK cells is currently not well-understood, multiple pathways are responsible for MDSC-mediated T cell suppression including production of arginase 1/ARG1 and upregulation of nitric oxide synthase 2 (iNOS). ARG1 and iNOS metabolize L-arginine and either together, or separately, cause the loss of the TCR zeta chain, promote nitration or nitrosylation of TCR, CD3, CD8, and CCL2, disrupt IL-2 signaling, and inhibit T cell proliferation. Additionally, MDSCs secrete immunosuppressive cytokines and induce regulatory T cell development. Although it is now evident that MDSCs are a major obstacle for immunotherapy, further characterization is necessary to determine how MDSCs accumulate, how they function, and mechanisms by which they can be inhibited. [R&D Systems](#), [Novus Biologicals](#), and [Tocris Biosciences](#) together offer a wide range of products for characterizing MDSCs and studying their functions.

MDSC-Mediated Mechanisms of Immunosuppression

Analysis of Human Granulocytic and Monocytic MDSCs by Flow Cytometry

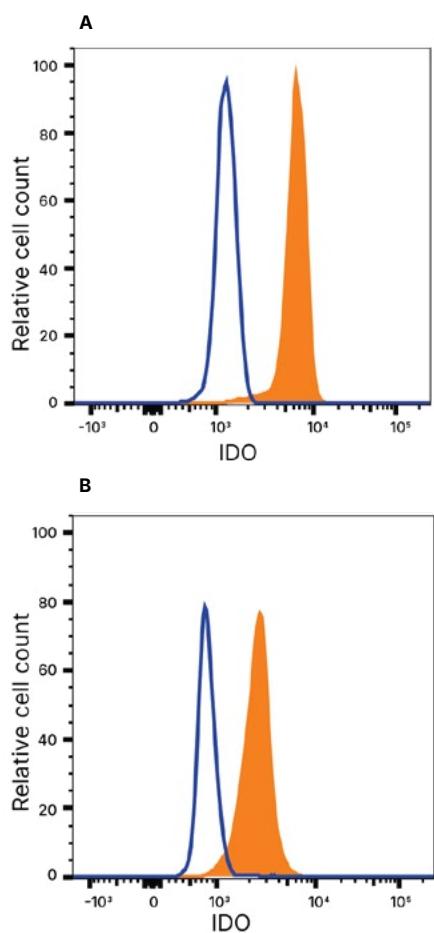

Identification of Human Granulocytic and Monocytic Myeloid-derived Suppressor Cells by Flow Cytometry. (A) Lin⁻/HLA-DR⁻ cells were detected in human peripheral blood mononuclear cells by staining with a lineage cocktail containing Alexa Fluor® 700-conjugated Mouse Anti-Human CD3ε and CD19 Monoclonal Antibodies (R&D Systems, Catalog # FAB100N and # FAB4867N, respectively) and an Alexa Fluor 750-conjugated Mouse Anti-Human HLA-DR Monoclonal Antibody (R&D Systems, Catalog # FAB4869S). Lin⁻/HLA-DR⁻ cells were gated. (B) CD11b⁺/CD33⁺ cells were detected in the Lin⁻/HLA-DR⁻ cell population by staining with an APC-conjugated Mouse Anti-Human Siglec-3/CD33 Monoclonal Antibody (R&D Systems, Catalog # FAB1137A) and an Alexa Fluor 405-conjugated Mouse Anti-Human Integrin αM/CD11b Monoclonal Antibody (R&D Systems, Catalog # FAB16991V). CD11b⁺/CD33⁺ cells were gated. (C) Human granulocytic myeloid-derived suppressor cells (Lin⁻/CD11b⁺/CD14⁻/CD33⁺/CEACAM-8⁺/HLA-DR⁻) and monocytic myeloid-derived suppressor cells (Lin⁻/CD11b⁺/CD14⁺/CD33⁺/CEACAM-8⁻/HLA-DR⁻) were detected in the Lin⁻/HLA-DR⁻/CD11b⁺/CD33⁺ cell population by staining with a PE-conjugated Mouse Anti-Human CEACAM-8/CD66b Monoclonal Antibody (R&D Systems, Catalog # FAB4246P) and a PerCP-conjugated Mouse Anti-Human CD14 Monoclonal Antibody (R&D Systems, Catalog # FAB3832C).

Alexa Fluor® is a registered trademark of Molecular Probes, Inc., Eugene, OR.

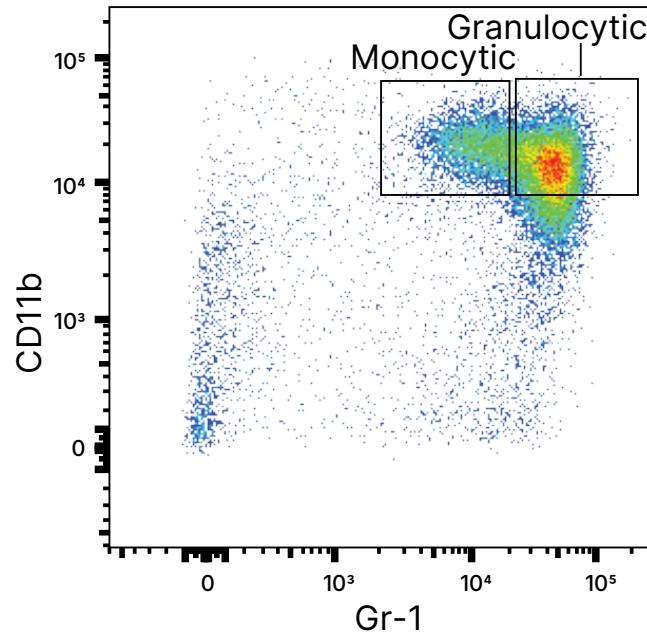

Detection of Arginase 1 Expression in Human Granulocytic and Monocytic Myeloid-derived Suppressor Cells by Flow Cytometry. Following identification of myeloid-derived suppressor cells (MDSCs) by flow cytometry, expression of Arginase 1 in the gated (A) granulocytic ($\text{Lin}^-/\text{CD11b}^+/\text{CD14}^-/\text{CD33}^+/\text{CEACAM-8}^+/\text{HLA-DR}^-$) and (B) monocytic ($\text{Lin}^-/\text{CD11b}^+/\text{CD14}^+/\text{CD33}^+/\text{CEACAM-8}^-/\text{HLA-DR}^-$) MDSC populations was determined by staining with an Alexa Fluor 488-conjugated Mouse Anti-Human Arginase 1/ARG1 Monoclonal Antibody (R&D Systems, Catalog # IC8026G; filled histograms) or an Alexa Fluor 488-conjugated Mouse IgG_{2B} Isotype Control (R&D Systems, Catalog # IC0041G; open histograms).

Detection of IDO in Human Granulocytic and Monocytic Myeloid-derived Suppressor Cells by Flow Cytometry. Following identification of myeloid-derived suppressor cells (MDSCs) by flow cytometry, expression of Indoleamine 2,3-dioxygenase/IDO in the gated (A) granulocytic ($\text{Lin}^-/\text{CD11b}^+/\text{CD14}^-/\text{CD33}^+/\text{CEACAM-8}^+/\text{HLA-DR}^-$) and (B) monocytic ($\text{Lin}^-/\text{CD11b}^+/\text{CD14}^+/\text{CD33}^+/\text{CEACAM-8}^-/\text{HLA-DR}^-$) MDSC populations was determined by staining with an Alexa Fluor 488-conjugated Mouse Anti-Human Indoleamine 2,3-dioxygenase/IDO Monoclonal Antibody (R&D Systems, Catalog # IC6030G; filled histograms) or an Alexa Fluor 488-conjugated Mouse IgG₁ Isotype Control (R&D Systems, Catalog # IC002G; open histograms).

Analysis of Mouse Granulocytic and Monocytic MDSCs by Flow Cytometry

Identification of Mouse Monocytic and Granulocytic Myeloid-derived Suppressor Cells by Flow Cytometry.

Mouse monocytic ($\text{CD11b}^+/\text{Gr-1}^{\text{low/mid}}/\text{Ly6C}^+$) and granulocytic ($\text{CD11b}^+/\text{Gr-1}^{\text{high}}/\text{Ly6C}^-$) myeloid-derived suppressor cells (MDSCs) from C57BL/6 mouse bone marrow cells were identified by staining with an APC-conjugated Rat Anti-Mouse Gr-1/Ly-6G Monoclonal Antibody (R&D Systems, Catalog # FAB1037A) and a PE-conjugated Rat Anti-Mouse Integrin α M/CD11b Monoclonal Antibody (R&D Systems, Catalog # FAB1124P). $\text{CD11b}^+/\text{Gr-1}^{\text{low/mid}}$ and $\text{CD11b}^+/\text{Gr-1}^{\text{high}}$ cells were gated to show the two populations of MDSCs.

Fluorochrome-conjugated & Unlabeled Antibodies from R&D Systems and Novus Biologicals

R&D Systems and Novus Biologicals offer a wide selection of unlabeled and fluorochrome-conjugated antibodies for the identification and characterization of mouse and human MDSCs.

Antibodies for Select Positive and Negative Markers used to Identify Granulocytic and Monocytic MDSCs by Flow Cytometry

Select Recombinant Proteins for Inducing MDSC-like Cells *in vitro*

Recombinant Proteins & ELISA Kits from R&D Systems

R&D Systems portfolio includes recombinant proteins for generating MDSC-like cells from bone marrow-derived cells and ELISA Kits for detecting molecules that affect MDSC proliferation or promote immunosuppression.

Molecule	Species	Catalog#
G-CSF	Human	214-CS
	Mouse	414-CS
GM-CSF	Human	215-GM
	Mouse	415-ML
IL-4	Human	BT-004
	Mouse	404-ML
IL-6	Human	206-IL
	Mouse	406-ML
IL-13	Human	213-ILB
	Mouse	413-ML

* Recombinant Human G-CSF, GM-CSF, IL-4, and IL-6 are also available as Animal-Free™ proteins and GMP-grade proteins with the exception of G-CSF.

Select ELISAs for Detecting Molecules Secreted by MDSCs or Molecules in the Tumor Microenvironment that Affect MDSCs

Molecule	Species	Quantikine® ELISA Catalog #	DuoSet® ELISA Catalog #
G-CSF	Human	DCS50	DY214
	Mouse	MCS00	DY414
GM-CSF	Human	DGM00	DY215
	Mouse	MGM00	DY415
IFN-γ	Human	DIF50C	DY285B
	Mouse	MIF00	DY485
IL-1β	Human	DLB50	DY201
	Mouse	MLB00C	DY401
IL-4	Human	D4050	DY204
	Mouse	M4000B	DY404
IL-6	Human	D6050B	DY206
	Mouse	M6000B	DY406
IL-10	Human	D1000B	DY217B
	Mouse	M1000B	DY417
IL-13	Human	D1300B	DY240
	Mouse	M1300CB	DY413
TGF-β1	Human	DB100C	DY240
	Mouse		DY1679
TNF-α	Human	DTA00D	DY210
	Mouse	MTA00B	DY410
VEGF	Human	DVE00	DY293B
	Mouse	MMV00	DY493

In addition to the single analyte ELISAs listed above, we also offer the membrane-based Proteome Profiler™ Human XL Cytokine Array (R&D Systems, Catalog # ARY022B) and Mouse XL Cytokine Array (R&D Systems, Catalog # ARY028), as well as bead-based Luminex® Screening and Performance Assays, which can be used to simultaneously detect most or all of these analytes.

Tocris Small Molecules for Myeloid-derived Suppressor Cell Research

Tocris Biosciences offers a large selection of small molecules that can be used to study MDSC functions.

Reported Activity on MDSCs*	Product Name	Catalog#	Product Description
Promote MDSC Differentiation	AM 580	0760	Retinoic acid analog; RAR α agonist
	Calcipotriol	2700	Analog of Vitamin D ₃
	Calcitriol	2551	Vitamin D receptor (VDR) agonist
	Retinoic Acid/ATRA	0695	Endogenous retinoic acid receptor agonist
Decrease MDSC Levels	Axitinib	4350	Potent inhibitor of VEGFR R2, R3, and R1
	Docetaxel	4056	Leads to cell cycle arrest; exhibits cytotoxic activity
	5-Fluorouracil	3257	Inhibits RNA and DNA synthesis; cytotoxic
	Gemcitabine	3259	Deoxycytidine analog that inhibits DNA synthesis
Inhibit MDSC Function	Sunitinib	3768	Potent VEGFR, PDGFR β , and KIT Inhibitor
	AMD 3100	3299**	Highly selective CXCR4 antagonist
	CDDO Im	4737	Nrf signaling inhibitor; immunomodulator
	Celecoxib	3786	Selective COX-2 inhibitor
	NS 398	0942	COX-2 inhibitor
	SB 225002	2725***	Potent and selective CXCR2 antagonist
	Sildenafil	3784	Orally active, potent PDE5 inhibitor

The reported activity on MDSCs is based on a publication by Najjar, Y.G. & J.H. Finke (2013) *Front. Oncol.* 3:49., except where indicated. ** Grabner B. et al. (2015) *Nat. Commun.* 6:6285. *** Talmadge J.E. & D.I. Gabrilovich (2013) *Nat. Rev. Cancer* 10:739.
