PRODUCT DESCRIPTION

Leibovitz's L-15 Medium was formulated for use in a carbon dioxide (CO₂) free environment. It contains no sodium bicarbonate, and is buffered by phosphates, free base amino acids, and galactose instead. L-15 supports the proliferation of many established cell lines and primary cells. L-15 includes including versions with HEPES buffer for a more effective buffering capacity.

Each lot of L-15 is prepared from a powdered base medium and tissue culture-grade water. Representative samples of each lot of L-15 are tested to confirm the absence of bacterial or fungal contamination using methods adapted from the current U.S. Pharmacopeia. L-15 is manufactured in our ISO 9001:2015 certified facility.

For the specific media formulation, please refer to the Media Formulation section of the datasheet.

STORAGE AND HANDLING

L-15 is supplied in gamma-irradiated, sterile PETG or PETE bottles. We recommend that L-15 be stored at a temperature of 2-8 °C, and protected from strong light. Always use aseptic techniques when handling and supplementing L-15.

PRECAUTION

When handling bio-hazardous materials such as human cells, safe laboratory procedures should be followed, and personal protective equipment should be worn.

LIMITATIONS

- FOR LABORATORY RESEARCH USE ONLY. NOT FOR USE IN DIAGNOSTIC PROCEDURES.
- The safety and efficacy of this product in diagnostic or other clinical uses has not been established.
- Results may vary due to variations among tissue/cells derived from different donors or sources.
