

DESCRIPTION

Species Reactivity	Human
Specificity	Detects human Integrin α 6/CD49f in direct ELISAs and Western blots. In direct ELISAs, less than 5% cross-reactivity with recombinant human (rh) Integrin α 9 is observed and less than 1% cross-reactivity with rhIntegrin α 2, recombinant m
Source	Polyclonal Goat IgG
Purification	Antigen Affinity-purified
Immunogen	<i>E. coli</i> -derived recombinant human Integrin α 6/CD49f Pro93-Arg148, Ile557-Arg613 Accession # P23229
Conjugate	Alexa Fluor 594 Excitation Wavelength: 590 nm Emission Wavelength: 617 nm
Formulation	Supplied 0.2mg/ml in 1X PBS with RDF1 and 0.09% Sodium Azide *Contains <0.1% Sodium Azide, which is not hazardous at this concentration according to GHS classifications. Refer to the Safety Data Sheet (SDS) for additional information and handling instructions.

APPLICATIONS

Please Note: Optimal dilutions should be determined by each laboratory for each application. [General Protocols](#) are available in the Technical Information section on our website.

Western Blot Optimal dilution of this antibody should be experimentally determined.

PREPARATION AND STORAGE

Shipping The product is shipped with polar packs. Upon receipt, store it immediately at the temperature recommended below.

Stability & Storage Protect from light. Do not freeze. 12 months from date of receipt, 2 to 8 °C as supplied

BACKGROUND

Integrin α 6 (also VLA-6, CD49F and ITA6) is a 130-150 kDa member of the integrin α chain family of molecules. Mature Integrin α 6 is a 1107 amino acid (aa) type I transmembrane glycoprotein that contains a 1027 aa extracellular region and a 93 aa cytoplasmic tail. The ECD is cleaved to generate a disulfide-linked dimer that shows a 125 kDa heavy chain (aa 24-938), and a 30-31 kDa membrane-bound light chain (aa 942-1130). Integrin α 6 forms a nondisulfide-linked heterodimeric complex with both integrin beta 1 and beta 4. Each complex serves as a receptor for laminin. Splice variants exist that show either a deletion of aa 215-258 or a deletion of aa 260-298, possibly accompanied by a 29 aa substitution for aa 1084-1130. Over aa 93-148 and 518-574, human Integrin α 6 shares 89% aa identity with mouse Integrin α 6.

PRODUCT SPECIFIC NOTICES

This product is provided under an agreement between Life Technologies Corporation and R&D Systems, Inc, and the manufacture, use, sale or import of this product is subject to one or more US patents and corresponding non-US equivalents, owned by Life Technologies Corporation and its affiliates. The purchase of this product conveys to the buyer the non-transferable right to use the purchased amount of the product and components of the product only in research conducted by the buyer (whether the buyer is an academic or for-profit entity). The sale of this product is expressly conditioned on the buyer not using the product or its components (1) in manufacturing; (2) to provide a service, information, or data to an unaffiliated third party for payment; (3) for therapeutic, diagnostic or prophylactic purposes; (4) to resell, sell, or otherwise transfer this product or its components to any third party, or for any other commercial purpose. Life Technologies Corporation will not assert a claim against the buyer of the infringement of the above patents based on the manufacture, use or sale of a commercial product developed in research by the buyer in which this product or its components was employed, provided that neither this product nor any of its components was used in the manufacture of such product. For information on purchasing a license to this product for purposes other than research, contact Life Technologies Corporation, Cell Analysis Business Unit, Business Development, 29851 Willow Creek Road, Eugene, OR 97402, Tel: (541) 465-8300. Fax: (541) 335-0354.
