

DESCRIPTION

Species Reactivity	Human
Specificity	Detects human ASAHL/N-acylethanolamine-hydrolyzing Acid A in direct ELISAs and Western blots. In Western blots, approximately 25% cross-reactivity with recombinant mouse ASAHL is observed.
Source	Polyclonal Goat IgG
Purification	Antigen Affinity-purified
Immunogen	Chinese hamster ovary cell line CHO-derived recombinant human ASAHL/N-acylethanolamine-hydrolyzing Acid A isoform 1 Ser29-Lys359 (Val151Ile) Accession # Q02083
Conjugate	Alexa Fluor 594 Excitation Wavelength: 590 nm Emission Wavelength: 617 nm
Formulation	Supplied 0.2mg/ml in 1X PBS with RDF1 and 0.09% Sodium Azide *Contains <0.1% Sodium Azide, which is not hazardous at this concentration according to GHS classifications. Refer to the Safety Data Sheet (SDS) for additional information and handling instructions.

APPLICATIONS

Please Note: Optimal dilutions should be determined by each laboratory for each application. [General Protocols](#) are available in the Technical Information section on our website.

Western Blot	Optimal dilution of this antibody should be experimentally determined.
Immunoprecipitation	Optimal dilution of this antibody should be experimentally determined.

PREPARATION AND STORAGE

Shipping	The product is shipped with polar packs. Upon receipt, store it immediately at the temperature recommended below.
Stability & Storage	Protect from light. Do not freeze. 12 months from date of receipt, 2 to 8 °C as supplied

BACKGROUND

ASAHL (N-acylsphingosine-amidohydrolase-like; N acylethanolamine hydrolyzing acid amidase; also acid ceramidase like protein) is a 30 kDa member of the acid ceramidase family. It is a secreted lysosomal glycoprotein that cleaves fatty acid amides such as palmitoylethanolamine. Human ASAHL is synthesized as a 359 amino acid (aa) preproprecursor that contains a 28 aa signal sequence, a 96 aa prosegment, and a 30 31 kDa, 235 aa mature region that begins at Cys125. Multiple isoforms likely exist. One isoform shows a deletion of aa 324 359, while another has a two aa substitution for aa 198 359. The human proform (aa 29 359) is 78% aa identical to mouse ASAHL proform.

PRODUCT SPECIFIC NOTICES

This product is provided under an agreement between Life Technologies Corporation and R&D Systems, Inc, and the manufacture, use, sale or import of this product is subject to one or more US patents and corresponding non-US equivalents, owned by Life Technologies Corporation and its affiliates. The purchase of this product conveys to the buyer the non-transferable right to use the purchased amount of the product and components of the product only in research conducted by the buyer (whether the buyer is an academic or for-profit entity). The sale of this product is expressly conditioned on the buyer not using the product or its components (1) in manufacturing; (2) to provide a service, information, or data to an unaffiliated third party for payment; (3) for therapeutic, diagnostic or prophylactic purposes; (4) to resell, sell, or otherwise transfer this product or its components to any third party, or for any other commercial purpose. Life Technologies Corporation will not assert a claim against the buyer of the infringement of the above patents based on the manufacture, use or sale of a commercial product developed in research by the buyer in which this product or its components was employed, provided that neither this product nor any of its components was used in the manufacture of such product. For information on purchasing a license to this product for purposes other than research, contact Life Technologies Corporation, Cell Analysis Business Unit, Business Development, 29851 Willow Creek Road, Eugene, OR 97402, Tel: (541) 465-8300. Fax: (541) 335-0354.
