

DESCRIPTION

Species Reactivity	Mouse
Specificity	Detects mouse MAGP-1/MFAP2 in direct ELISAs and Western blots. In direct ELISAs, approximately 35% cross-reactivity with recombinant human MAGP-1 is observed.
Source	Polyclonal Goat IgG
Purification	Antigen Affinity-purified
Immunogen	Mouse myeloma cell line NS0-derived recombinant mouse MAGP-1/MFAP2 Gln17-Cys183 Accession # P55002
Conjugate	Alexa Fluor 350 Excitation Wavelength: 346 nm Emission Wavelength: 442 nm
Formulation	Supplied 0.2mg/ml in 1X PBS with RDF1 and 0.09% Sodium Azide *Contains <0.1% Sodium Azide, which is not hazardous at this concentration according to GHS classifications. Refer to the Safety Data Sheet (SDS) for additional information and handling instructions.

APPLICATIONS

Please Note: Optimal dilutions should be determined by each laboratory for each application. [General Protocols](#) are available in the Technical Information section on our website.

Western Blot Optimal dilution of this antibody should be experimentally determined.

PREPARATION AND STORAGE

Shipping The product is shipped with polar packs. Upon receipt, store it immediately at the temperature recommended below.

Stability & Storage Protect from light. Do not freeze. 12 months from date of receipt, 2 to 8 °C as supplied

BACKGROUND

MAGP-1 (Microfibril-associated glycoprotein 1; also MFAP-2) is a 30-33 kDa member of the MFAP family of proteins. It is secreted by endothelial and smooth muscle cells. MAGP-1 apparently mediates the release of Notch extracellular domain and also likely binds to type IV collagen and contributes to elastin fiber formation. Mature mouse MAGP-1 is 167 amino acids (aa) in length. It contains a transglutamination site at Gln20, a tyrosine sulfation motif (aa 46-49), two potential O-linked glycosylation sites (Thr56 and Thr76), and a Cys-rich C-terminus that generates intermolecular disulfide bonds. One potential splice variant exists that is strictly intracellular and a second shows a 22 aa substitution for the C-terminal 127 amino acids. Mature mouse MAGP-1 is 94% and 87% aa identical to rat and human MAGP-1, respectively.

PRODUCT SPECIFIC NOTICES

This product is provided under an agreement between Life Technologies Corporation and R&D Systems, Inc, and the manufacture, use, sale or import of this product is subject to one or more US patents and corresponding non-US equivalents, owned by Life Technologies Corporation and its affiliates. The purchase of this product conveys to the buyer the non-transferable right to use the purchased amount of the product and components of the product only in research conducted by the buyer (whether the buyer is an academic or for-profit entity). The sale of this product is expressly conditioned on the buyer not using the product or its components (1) in manufacturing; (2) to provide a service, information, or data to an unaffiliated third party for payment; (3) for therapeutic, diagnostic or prophylactic purposes; (4) to resell, sell, or otherwise transfer this product or its components to any third party, or for any other commercial purpose. Life Technologies Corporation will not assert a claim against the buyer of the infringement of the above patents based on the manufacture, use or sale of a commercial product developed in research by the buyer in which this product or its components was employed, provided that neither this product nor any of its components was used in the manufacture of such product. For information on purchasing a license to this product for purposes other than research, contact Life Technologies Corporation, Cell Analysis Business Unit, Business Development, 29851 Willow Creek Road, Eugene, OR 97402, Tel: (541) 465-8300. Fax: (541) 335-0354.
