

DESCRIPTION

Species Reactivity	Human/Mouse
Specificity	Detects human and mouse MYB in Western blots.
Source	Polyclonal Sheep IgG
Purification	Antigen Affinity-purified
Immunogen	<i>E. coli</i> -derived recombinant human MYB Lys503-Met640 Accession # P10242
Conjugate	Alexa Fluor 700 Excitation Wavelength: 675-700 nm Emission Wavelength: 723 nm
Formulation	Supplied 0.2mg/ml in 1X PBS with RDF1 and 0.09% Sodium Azide
*Contains <0.1% Sodium Azide, which is not hazardous at this concentration according to GHS classifications. Refer to the Safety Data Sheet (SDS) for additional information and handling instructions.	

APPLICATIONS

Please Note: Optimal dilutions should be determined by each laboratory for each application. General Protocols are available in the Technical Information section on our website.

Western Blot Optimal dilution of this antibody should be experimentally determined.

PREPARATION AND STORAGE

Shipping	The product is shipped with polar packs. Upon receipt, store it immediately at the temperature recommended below.
Stability & Storage	Protect from light. Do not freeze. 12 months from date of receipt, 2 to 8 °C as supplied

BACKGROUND

MYB (*myeloblastosis protooncogene*) is an 80 kDa transcriptional activator. It is found in hematopoietic and intestinal crypt epithelial cells. MYB interacts with p300 and activates multiple genes, including Bcl2, GATA3, and MYC. Although MYB is thought of as a pro-proliferation and antidiifferentiation factor, it would now appear that MYB contributes to both T- and B-cell maturation and to cell survival in general. Human MYB is 640 amino acids (aa) in length. It contains three DNA binding, HTH-myb type domains (aa 35-193), one transcriptional activation segment (aa 275-327), and a Leu-zipper motif (aa 376-397). There are multiple potential splice forms. One shows an alternate start site at Met189 coupled with a 99 aa substitution for aa 567-640. Another shows a 121 aa insertion after Ser401. Four show C-terminal substitutions: a 34 aa substitution for aa 314-640, a Met substitution for aa 402-640, a seven aa substitution for aa 317-640, and a 10 aa substitution for aa 603-640. Over aa 503-640, human MYB shares 84% aa identity with mouse MYB.

PRODUCT SPECIFIC NOTICES

This product is provided under an agreement between Life Technologies Corporation and R&D Systems, Inc, and the manufacture, use, sale or import of this product is subject to one or more US patents and corresponding non-US equivalents, owned by Life Technologies Corporation and its affiliates. The purchase of this product conveys to the buyer the non-transferable right to use the purchased amount of the product and components of the product only in research conducted by the buyer (whether the buyer is an academic or for-profit entity). The sale of this product is expressly conditioned on the buyer not using the product or its components (1) in manufacturing; (2) to provide a service, information, or data to an unaffiliated third party for payment; (3) for therapeutic, diagnostic or prophylactic purposes; (4) to resell, sell, or otherwise transfer this product or its components to any third party, or for any other commercial purpose. Life Technologies Corporation will not assert a claim against the buyer of the infringement of the above patents based on the manufacture, use or sale of a commercial product developed in research by the buyer in which this product or its components was employed, provided that neither this product nor any of its components was used in the manufacture of such product. For information on purchasing a license to this product for purposes other than research, contact Life Technologies Corporation, Cell Analysis Business Unit, Business Development, 29851 Willow Creek Road, Eugene, OR 97402, Tel: (541) 465-8300. Fax: (541) 335-0354.
