

DESCRIPTION

Species Reactivity	Mouse
Specificity	Detects mouse S100A16 in direct ELISAs and Western blots. In direct ELISAs, approximately 30% cross-reactivity with recombinant human S100A16 is observed, and less than 1% cross-reactivity with recombinant mouse S100A4, recombinant human (rh) S100A2, and
Source	Polyclonal Sheep IgG
Purification	Antigen Affinity-purified
Immunogen	E.coli-derived recombinant mouse S100A16 Ala2-Ser124 Accession # NP_080692
Conjugate	Alexa Fluor 594 Excitation Wavelength: 590 nm Emission Wavelength: 617 nm
Formulation	Supplied 0.2mg/ml in 1X PBS with RDF1 and 0.09% Sodium Azide *Contains <0.1% Sodium Azide, which is not hazardous at this concentration according to GHS classifications. Refer to the Safety Data Sheet (SDS) for additional information and handling instructions.

APPLICATIONS

Please Note: Optimal dilutions should be determined by each laboratory for each application. [General Protocols](#) are available in the Technical Information section on our website.

Western Blot Optimal dilution of this antibody should be experimentally determined.

PREPARATION AND STORAGE

Shipping The product is shipped with polar packs. Upon receipt, store it immediately at the temperature recommended below.

Stability & Storage Protect from light. Do not freeze. 12 months from date of receipt, 2 to 8 °C as supplied

BACKGROUND

Mouse S100A16 (S100 calcium-binding protein A16; also S100F and AAG13) is a 15-18 kDa member of the S100 family of calcium-binding proteins. It is found in both cytoplasm (when Ca is high) and nucleus (when Ca is low), and its expression appears to be restricted to astrocytes found in select areas of the brain. S100A16 is 124 amino acids (aa) in length. Based on human, it will contain an N-terminal non-Ca-binding EF-hand domain (aa 12-47), a C-terminal Ca-binding EF-hand domain (aa 54-89), and a putative FGF-1 binding site (aa 91-94). There is one potential myristoylation site (aa 54-59) and a phosphorylation site at Ser124. S100A16 will homodimerize, and perhaps form higher order oligomers. Full length mouse S100A16 shares 95% aa identity with rat S100A16. Relative to human S100A16, mouse S100A16 possesses a 21 aa Glu/Gln-rich insertion after Glu98 that reduces the shared aa homology between mouse and human S100A16 to 72% aa identity.

PRODUCT SPECIFIC NOTICES

This product is provided under an agreement between Life Technologies Corporation and R&D Systems, Inc, and the manufacture, use, sale or import of this product is subject to one or more US patents and corresponding non-US equivalents, owned by Life Technologies Corporation and its affiliates. The purchase of this product conveys to the buyer the non-transferable right to use the purchased amount of the product and components of the product only in research conducted by the buyer (whether the buyer is an academic or for-profit entity). The sale of this product is expressly conditioned on the buyer not using the product or its components (1) in manufacturing; (2) to provide a service, information, or data to an unaffiliated third party for payment; (3) for therapeutic, diagnostic or prophylactic purposes; (4) to resell, sell, or otherwise transfer this product or its components to any third party, or for any other commercial purpose. Life Technologies Corporation will not assert a claim against the buyer of the infringement of the above patents based on the manufacture, use or sale of a commercial product developed in research by the buyer in which this product or its components was employed, provided that neither this product nor any of its components was used in the manufacture of such product. For information on purchasing a license to this product for purposes other than research, contact Life Technologies Corporation, Cell Analysis Business Unit, Business Development, 29851 Willow Creek Road, Eugene, OR 97402, Tel: (541) 465-8300. Fax: (541) 335-0354.
