

Human Integrin β1/CD29 Biotinylated Antibody

Antigen Affinity-purified Polyclonal Goat IgG Catalog Number: BAF1778

DESCRIPTION		
Species Reactivity	Human	
Specificity	Detects human Integrin β1 in Western blots. In Western blots, approximately 20% cross-reactivity with recombinant mouse (rm) Integrin β1 is observed and less than 1% cross-reactivity recombinant human (rh) Integrin β2, rhIntegrin β3, rmIntegrin β6, and rmIntegrin β7 is observed.	
Source	Polyclonal Goat IgG	
Purification	Antigen Affinity-purified	
Immunogen	Chinese hamster ovary cell line CHO-derived recombinant human Integrin β1 isoform 1A GIn21-Asp728 Accession # P05556	
Formulation	Lyophilized from a 0.2 µm filtered solution in PBS with BSA as a carrier protein. See Certificate of Analysis for details.	

APPLICATIONS

Please Note: Optimal dilutions should be determined by each laboratory for each application. General Protocols are available in the Technical Information section on our website.

	Recommended Concentration	Sample
Western Blot	0.1 μg/mL	Recombinant Human Integrin β1/CD29
Flow Cytometry	0.25 μg/10 ⁶ cells	See Below

Detection of Integrin β 1/CD29 in Human PBMCs by Flow Cytometry. Human peripheral blood mononuclear cells (PBMCs) were stained with Goat Anti-Human Integrin β 1/CD29 Biotinylated Antigen Affinity-purified Polyclonal Antibody (Catalog # BAF1778, filled histogram) or isotype control antibody (Catalog # BAF108, open histogram), followed by Streptavidin-Phycoerythrin (Catalog # F0040).

PREPARATION AND STORAGE

Reconstitution Reconstitute at 0.2 mg/mL in sterile PBS.

Shipping The product is shipped at ambient temperature. Upon receipt, store it immediately at the temperature recommended below.

Stability & Storage

Use a manual defrost freezer and avoid repeated freeze-thaw cycles.

- 12 months from date of receipt, -20 to -70 °C as supplied
- 1 month, 2 to 8 °C under sterile conditions after reconstitution.
- 6 months, -20 to -70 °C under sterile conditions after reconstitution

BACKGROUND

Integrin β1, also called CD29 and VLA-β chain, associates with at least ten different integrin α subunits to form various VLA complexes. The β1 subunit has a broad tissue distribution except erythrocytes.
