## BACKGROUND

NPY2R is a member of the G protein-coupled receptor 1 family. Functionally, NPY2R is a receptor for neuropeptide Y and peptide YY. Neuropeptide Y is one of the most abundant neuropeptides in the mammalian nervous system and exhibits a diverse range of important physiologic activities, including effects on psychomotor activity, food intake, regulation of central endocrine secretion, and potent vasoactive effects on the cardiovascular system. NPY receptors represent novel molecular therapeutic targets in cancer and obesity.
