

DESCRIPTION

Species Reactivity	Human
Specificity	Detects a synthetic peptide specific for human STEAP-2 around amino acid 460 in Direct ELISA.
Source	Monoclonal Mouse IgG _{2A} Clone # 1114318
Purification	Protein A or G purified from cell culture supernatant
Immunogen	Synthetic Peptide Accession # Q8NFT2
Conjugate	Alexa Fluor 594 Excitation Wavelength: 590 nm Emission Wavelength: 617 nm
Formulation	Supplied 0.2 mg/mL in a saline solution containing BSA and Sodium Azide. *Contains <0.1% Sodium Azide, which is not hazardous at this concentration according to GHS classifications. Refer to the Safety Data Sheet (SDS) for additional information and handling instructions.

APPLICATIONS

Please Note: Optimal dilutions should be determined by each laboratory for each application. *General Protocols* are available in the *Technical Information* section on our website.

Immunocytochemistry	Optimal dilution of this antibody should be experimentally determined.
Immunohistochemistry	Optimal dilution of this antibody should be experimentally determined.

PREPARATION AND STORAGE

Shipping	The product is shipped with polar packs. Upon receipt, store it immediately at the temperature recommended below.
Stability & Storage	Protect from light. Do not freeze. 12 months from date of receipt, 2 to 8 °C as supplied

BACKGROUND

Six-transmembrane epithelial antigen of the prostate 2 (STEAP2) is a member of the STEAP family of metalloredoxases, with a molecular weight of approximately 49 kDa. STEAP2 is an integral membrane protein that plays a role in cellular homeostasis by facilitating the reduction of metal ions such as iron and copper, which are critical cofactors for various enzymatic processes. STEAP2 is highly expressed in prostate tissue and is also detected at lower levels in other tissues, supporting its emerging role in tissue-specific metabolic regulation. Overexpression of STEAP2 has been implicated in prostate cancer progression, where it contributes to the proliferation, migration, and invasiveness of tumor cells. The dysregulation of STEAP2 expression has also been associated with other malignancies, suggesting its broader significance in cancer biology. Additionally, STEAP2 has garnered interest as a potential biomarker for cancer diagnosis and prognosis, as well as a therapeutic target, particularly in prostate and other hormone-regulated cancers.

PRODUCT SPECIFIC NOTICES

This product is provided under an agreement between Life Technologies Corporation and R&D Systems, Inc, and the manufacture, use, sale or import of this product is subject to one or more US patents and corresponding non-US equivalents, owned by Life Technologies Corporation and its affiliates. The purchase of this product conveys to the buyer the non-transferable right to use the purchased amount of the product and components of the product only in research conducted by the buyer (whether the buyer is an academic or for-profit entity). The sale of this product is expressly conditioned on the buyer not using the product or its components (1) in manufacturing; (2) to provide a service, information, or data to an unaffiliated third party for payment; (3) for therapeutic, diagnostic or prophylactic purposes; (4) to resell, sell, or otherwise transfer this product or its components to any third party, or for any other commercial purpose. Life Technologies Corporation will not assert a claim against the buyer of the infringement of the above patents based on the manufacture, use or sale of a commercial product developed in research by the buyer in which this product or its components was employed, provided that neither this product nor any of its components was used in the manufacture of such product. For information on purchasing a license to this product for purposes other than research, contact Life Technologies Corporation, Cell Analysis Business Unit, Business Development, 29851 Willow Creek Road, Eugene, OR 97402, Tel: (541) 465-8300. Fax: (541) 335-0354.
