

**DESCRIPTION**

<b>Species Reactivity</b>	Human
<b>Specificity</b>	Detects a synthetic peptide specific for human WIZ around amino acid 1100 in Direct ELISA.
<b>Source</b>	Monoclonal Mouse IgG Clone # 1110627
<b>Purification</b>	Protein A or G purified from cell culture supernatant
<b>Immunogen</b>	Synthetic Peptide Accession # O95785
<b>Conjugate</b>	Alexa Fluor 350 Excitation Wavelength: 346 nm Emission Wavelength: 442 nm
<b>Formulation</b>	Supplied 0.2 mg/mL in a saline solution containing BSA and Sodium Azide.  *Contains <0.1% Sodium Azide, which is not hazardous at this concentration according to GHS classifications. Refer to the Safety Data Sheet (SDS) for additional information and handling instructions.

**APPLICATIONS**

**Please Note:** Optimal dilutions should be determined by each laboratory for each application. General Protocols are available in the Technical Information section on our website.

**Immunocytochemistry** Optimal dilution of this antibody should be experimentally determined.

**PREPARATION AND STORAGE**

**Shipping** The product is shipped with polar packs. Upon receipt, store it immediately at the temperature recommended below.

**Stability & Storage** Protect from light. Do not freeze. 12 months from date of receipt, 2 to 8 °C as supplied

**BACKGROUND**

Widely interspaced zinc finger motifs (WIZ) is an epigenetic regulatory protein with a molecular weight of approximately 95 kDa. This protein plays a critical role in chromatin remodeling and transcriptional regulation by interacting with key epigenetic modifiers such as G9a/GLP and other chromatin-associated complexes. WIZ is ubiquitously expressed across various tissues and is essential for maintaining proper gene expression patterns during development and differentiation. It has been implicated in processes such as neuronal development, where it facilitates neuron-specific gene activation and repression, and in safeguarding chromatin architecture. Dysregulation of WIZ expression or function contributes to pathological conditions, including various neuropsychiatric disorders and cancer, where its role in epigenetic silencing can influence tumorigenesis and disease progression. Mutations in the WIZ gene are associated with cognitive impairments and developmental delay syndromes, suggesting its importance in neuroplasticity and brain development. As a key mediator of chromatin dynamics, WIZ serves as a promising target for research into epigenetic therapies and biomarkers of disease.

**PRODUCT SPECIFIC NOTICES**

This product is provided under an agreement between Life Technologies Corporation and R&D Systems, Inc, and the manufacture, use, sale or import of this product is subject to one or more US patents and corresponding non-US equivalents, owned by Life Technologies Corporation and its affiliates. The purchase of this product conveys to the buyer the non-transferable right to use the purchased amount of the product and components of the product only in research conducted by the buyer (whether the buyer is an academic or for-profit entity). The sale of this product is expressly conditioned on the buyer not using the product or its components (1) in manufacturing; (2) to provide a service, information, or data to an unaffiliated third party for payment; (3) for therapeutic, diagnostic or prophylactic purposes; (4) to resell, sell, or otherwise transfer this product or its components to any third party, or for any other commercial purpose. Life Technologies Corporation will not assert a claim against the buyer of the infringement of the above patents based on the manufacture, use or sale of a commercial product developed in research by the buyer in which this product or its components was employed, provided that neither this product nor any of its components was used in the manufacture of such product. For information on purchasing a license to this product for purposes other than research, contact Life Technologies Corporation, Cell Analysis Business Unit, Business Development, 29851 Willow Creek Road, Eugene, OR 97402, Tel: (541) 465-8300. Fax: (541) 335-0354.
