

DESCRIPTION

Species Reactivity	Canine
Specificity	Detects canine CD34 in Western blots.
Source	Monoclonal Mouse IgG ₁ Clone # 1H6
Purification	Protein A or G purified from hybridoma culture supernatant
Immunogen	COS-7 African green monkey SV40 transformed kidney fibroblast-like cell line-derived recombinant canine CD34
Conjugate	Allophycocyanin Excitation Wavelength: 620-650 nm Emission Wavelength: 660-670 nm
Formulation	Supplied in a saline solution containing BSA and Sodium Azide. See Certificate of Analysis for details. *Contains <0.1% Sodium Azide, which is not hazardous at this concentration according to GHS classifications. Refer to the Safety Data Sheet (SDS) for additional information and handling instructions.

APPLICATIONS

Please Note: Optimal dilutions should be determined by each laboratory for each application. *General Protocols* are available in the *Technical Information* section on our website.

	Recommended Concentration	Sample
Flow Cytometry	10 µL/10 ⁶ cells	See Below

DATA

PREPARATION AND STORAGE

Shipping	The product is shipped with polar packs. Upon receipt, store it immediately at the temperature recommended below.
Stability & Storage	Protect from light. Do not freeze. <ul style="list-style-type: none"> ● 12 months from date of receipt, 2 to 8 °C as supplied.

BACKGROUND

CD34 is a 100 kDa highly glycosylated member of the CD34 family of molecules. In dog, it is a 366 amino acid (aa) type I transmembrane protein that contains a 271 aa extracellular domain (ECD). Although originally identified on the surface of hematopoietic stem cells and vascular endothelial progenitors, it is now known to be expressed by highly divergent cell types such as telocytes/ICLC (cardiac support cells), cytotoxic NK lineage restricted progenitors, muscle satellite cells, corneal keratocytes (fibroblasts) and dendritic cell progenitors (with the exception of pre-conventional DCs). Little is known about CD34 ligands, save for L-Selectin. Canine CD34 ECD shares 60% aa sequence identity with human CD34 ECD.
