BACKGROUND

IL-17 R, also known as IL-17 RA, is a widely expressed 120 kDa glycosylated type I transmembrane protein that plays a central role in inflammatory responses. IL-17 R associates with IL-17 RC to form a signaling receptor complex for IL-17 and IL-17F. IL-17 R ligation promotes T cell activation and the production of IL-6, G-CSF, SCF, and multiple proinflammatory chemokines. Within the ECD, mouse IL-17 R shares 84% and 72% aa sequence identity with rat and human IL17 R, respectively.
