BACKGROUND

Human Integrin $\beta 7$ (also Integrin βP and M290 IEL Ag) is a 120 kDa member of the Integrin beta chain family of molecules. It is a type I transmembrane glycoprotein that contains a 704 amino acid (aa) extracellular domain (ECD) (aa 20–723) and a 52 aa cytoplasmic tail. The ECD contains one von Willebrand factor A domain (aa 150–389) and four cysteine-rich EGF-like repeats. One splice variant exists that shows a deletion of aa 501–648. Integrin $\beta 7$ forms a nondisulfide linked heterodimer with $\alpha 4$ and αE integrins. $\alpha 4\beta 7$ binds fibronectin, VCAM-1 and MADCAM1, while $\alpha E\beta 7$ binds E-cadherin. The ECD of human $\beta 7$ is 87% aa identical to the ECD of mouse $\beta 7$.
