

DESCRIPTION

Species Reactivity	Human
Specificity	Detects human Alkaline Phosphatase/ALPP in direct ELISAs. In direct ELISAs, this antibody cross-reacts at 100% with recombinant human (rh) ALPPL2, but no cross-reactivity with rhAlkaline Phosphatase/ALPI is observed.
Source	Monoclonal Mouse IgG ₁ Clone # 696128
Purification	Protein A or G purified from hybridoma culture supernatant
Immunogen	Mouse myeloma cell line NS0-derived recombinant human Alkaline Phosphatase/ALPP Ile23-Asp506 Accession # P05187
Conjugate	Alexa Fluor 488 Excitation Wavelength: 488 nm Emission Wavelength: 515-545 nm
Formulation	Supplied 0.2mg/ml in 1X PBS with RDF1 and 0.09% Sodium Azide *Contains <0.1% Sodium Azide, which is not hazardous at this concentration according to GHS classifications. Refer to the Safety Data Sheet (SDS) for additional information and handling instructions.

APPLICATIONS

Please Note: Optimal dilutions should be determined by each laboratory for each application. *General Protocols* are available in the *Technical Information* section on our website.

Western Blot	Optimal dilution of this antibody should be experimentally determined.
Immunohistochemistry	Optimal dilution of this antibody should be experimentally determined.

PREPARATION AND STORAGE

Shipping	The product is shipped with polar packs. Upon receipt, store it immediately at the temperature recommended below.
Stability & Storage	Protect from light. Do not freeze. 12 months from date of receipt, 2 to 8 °C as supplied

BACKGROUND

Four distinct genes encode alkaline phosphatases (APs) in humans. The ALPP gene encodes the 67 kDa placental isozyme, also known as PLAP. In comparison, ALPI, ALPL, and ALPPL2 encode intestinal, liver/bone/kidney, and placental-like or germ cell APs, respectively. The placental alkaline phosphatase is a glycosyl phosphatidylinositol (GPI) anchored protein that is expressed on the cell surface as a homodimer. Human APs are ectopically expressed in several cancers, and their serum levels are useful tumor markers. Mature human Alkaline Phosphatase/ALPP shares 74% amino acid sequence homology with the mouse and rat enzymes.

PRODUCT SPECIFIC NOTICES

This product is provided under an agreement between Life Technologies Corporation and R&D Systems, Inc, and the manufacture, use, sale or import of this product is subject to one or more US patents and corresponding non-US equivalents, owned by Life Technologies Corporation and its affiliates. The purchase of this product conveys to the buyer the non-transferable right to use the purchased amount of the product and components of the product only in research conducted by the buyer (whether the buyer is an academic or for-profit entity). The sale of this product is expressly conditioned on the buyer not using the product or its components (1) in manufacturing; (2) to provide a service, information, or data to an unaffiliated third party for payment; (3) for therapeutic, diagnostic or prophylactic purposes; (4) to resell, sell, or otherwise transfer this product or its components to any third party, or for any other commercial purpose. Life Technologies Corporation will not assert a claim against the buyer of the infringement of the above patents based on the manufacture, use or sale of a commercial product developed in research by the buyer in which this product or its components was employed, provided that neither this product nor any of its components was used in the manufacture of such product. For information on purchasing a license to this product for purposes other than research, contact Life Technologies Corporation, Cell Analysis Business Unit, Business Development, 29851 Willow Creek Road, Eugene, OR 97402, Tel: (541) 465-8300. Fax: (541) 335-0354.
