Human SLITRK6 Alexa Fluor® 488-conjugated Antibody

Monoclonal Mouse IgG_{2A} Clone # 753826

Catalog Number: FAB7317G

100 µg

DESCRIPTION

Species Reactivity	Human
Specificity	Detects human SLITRK-6 in direct ELISAs.
Source	Monoclonal Mouse IgG_{2A} Clone # 753826
Purification	Protein A or G purified from hybridoma culture supernatant
Immunogen	Mouse myeloma cell line NS0-derived recombinant human SLITRK-6 Ile16-Ala604 Accession # Q9H5Y7
Conjugate	Alexa Fluor 488 Excitation Wavelength: 488 nm Emission Wavelength: 515-545 nm
Formulation	Supplied 0.2mg/ml in 1X PBS with RDF1 and 0.09% Sodium Azide *Contains <0.1% Sodium Azide, which is not hazardous at this concentration according to GHS classifications. Refer to the Safety Data Sheet (SDS) for additional information and handling instructions.

APPLICATIONS

Please Note: *Optimal dilutions should be determined by each laboratory for each application. General Protocols are available in the Technical Information section on our website.*

Immunocytochemistry	Optimal dilution of this antibody should be experimentally determined.

PREPARATION AND STORAGE

Shipping	The product is shipped with polar packs. Upon receipt, store it immediately at the temperature recommended below.
Stability & Storage	Protect from light. Do not freeze. 12 months from date of receipt, 2 to 8 °C as supplied

BACKGROUND

SLITRK6 (Slit and NTRK-like 6) is a 95 kDa (predicted) member of the SLITRK family of proteins. It is widely expressed in the embryo, including cells in limb bud mesenchyme, visceral organ primodia, cells of the dorsal thalamus, and cochlear plus vestibular sensory epithelium. In the ear, SLITRK6 is suggested to induce neurotrophin expression from cells, thus promoting sensory neuron survival and axon pathfinding. Mature human SLITRK6 is an 826 amino acid (aa) type I transmembrane protein. It contains a 593 aa extracellular domain (ECD) (aa 16-608) plus a 212 aa cytoplasmic region. The ECD possesses two LRR clusters, one that involves seven LRRs (aa 27-269), and a second that involves eight LRRs (aa 320-568). Over aa 16-604, human SLITRK6 shares 89% aa sequence identity with mouse SLITRK6.

PRODUCT SPECIFIC NOTICES

This product is provided under an agreement between Life Technologies Corporation and R&D Systems, Inc, and the manufacture, use, sale or import of this product is subject to one or more US patents and corresponding non-US equivalents, owned by Life Technologies Corporation and its affiliates. The purchase of this product conveys to the buyer the non-transferable right to use the purchased amount of the product and components of the product only in research conducted by the buyer (whether the buyer is an academic or for-profit entity). The sale of this product is expressly conditioned on the buyer not using the product or its components (1) in manufacturing; (2) to provide a service, information, or data to an unaffiliated third party for payment; (3) for therapeutic, diagnostic or prophylactic purposes; (4) to resell, sell, or otherwise transfer this product or its components to any third party, or for any other commercial purpose. Life Technologies Corporation will not assert a claim against the buyer of the infringement of the above patents based on the manufacture, use or sale of a commercial product developed in research by the buyer in which this product or its components was employed, provided that neither this product nor any of its components was used in the manufacture of such product. For information on purchasing a license to this product for purposes other than research, contact Life Technologies Corporation, Cell Analysis Business Unit, Business Development, 29851 Willow Creek Road, Eugene, OR 97402, Tel: (541) 465-8300. Fax: (541) 335-0354.
