BACKGROUND

CD24, also known as Heat Stable Antigen (HSA), is a heavily and variably glycosylated 35-60 kDa GPI-linked sialoprotein. CD24 is expressed on B cells, T cells, keratinocytes, and myofiber synaptic nuclei and is upregulated in a wide variety of cancers. It is also a marker for exosomes released into the urine and amniotic fluid. CD24 binds to P-Selectin on activated platelets and vascular endothelial cells. CD24 ligation induces tumor cell apoptosis and is important for the deletion of autoreactive T cells. Mature mouse CD24 shares 30% aa sequence identity with human CD24.
