

DESCRIPTION

Species Reactivity	Human
Specificity	Detects human Pro-BNP but does not detect mature human BNP peptide in direct ELISAs.
Source	Monoclonal Mouse IgG Clone # 817130R
Purification	Protein A or G purified from cell culture supernatant
Immunogen	<i>E. coli</i> -derived recombinant human Pro-BNP His27-His134 Accession # P16860
Conjugate	Alexa Fluor 488 Excitation Wavelength: 488 nm Emission Wavelength: 515-545 nm
Formulation	Supplied 0.2mg/ml in 1X PBS with RDF1 and 0.09% Sodium Azide
*Contains <0.1% Sodium Azide, which is not hazardous at this concentration according to GHS classifications. Refer to the Safety Data Sheet (SDS) for additional information and handling instructions.	

APPLICATIONS

Please Note: Optimal dilutions should be determined by each laboratory for each application. [General Protocols](#) are available in the Technical Information section on our website.

ELISA Optimal dilution of this antibody should be experimentally determined.

PREPARATION AND STORAGE

Shipping	The product is shipped with polar packs. Upon receipt, store it immediately at the temperature recommended below.
Stability & Storage	Protect from light. Do not freeze. 12 months from date of receipt, 2 to 8 °C as supplied

BACKGROUND

Human BNP (brain natriuretic peptide) is a 3.5 kDa, secreted, nonglycosylated peptide that belongs to the natriuretic peptide family. It is the product of ventricular myocytes and bone marrow endothelial cells. BNP is synthesized as a 12 kDa, 108 amino acid (aa) prohormone with a 76 aa prosegment and a 32 aa mature (BNP) region. Both forms circulate, with the prohormone showing O-linked glycosylation that generates a 25-27 kDa glycoprotein. Glycosylation is suggested to stabilize the molecule. The proform also tends to noncovalently trimerize. In blood, 1-32 BNP is proteolytically processed into 3-32 BNP, with loss of Ser-Pro at the N-terminus. Human Pro-BNP is 29% and 50% aa identical to mouse and pig Pro-BNP, respectively.

PRODUCT SPECIFIC NOTICES

This product is provided under an agreement between Life Technologies Corporation and R&D Systems, Inc, and the manufacture, use, sale or import of this product is subject to one or more US patents and corresponding non-US equivalents, owned by Life Technologies Corporation and its affiliates. The purchase of this product conveys to the buyer the non-transferable right to use the purchased amount of the product and components of the product only in research conducted by the buyer (whether the buyer is an academic or for-profit entity). The sale of this product is expressly conditioned on the buyer not using the product or its components (1) in manufacturing; (2) to provide a service, information, or data to an unaffiliated third party for payment; (3) for therapeutic, diagnostic or prophylactic purposes; (4) to resell, sell, or otherwise transfer this product or its components to any third party, or for any other commercial purpose. Life Technologies Corporation will not assert a claim against the buyer of the infringement of the above patents based on the manufacture, use or sale of a commercial product developed in research by the buyer in which this product or its components was employed, provided that neither this product nor any of its components was used in the manufacture of such product. For information on purchasing a license to this product for purposes other than research, contact Life Technologies Corporation, Cell Analysis Business Unit, Business Development, 29851 Willow Creek Road, Eugene, OR 97402, Tel: (541) 465-8300. Fax: (541) 335-0354.
