## DATA

### Immunocytochemistry

**Laminin  $\gamma$ 1 in LS180 Human Cell Line.**  
Laminin  $\gamma$ 1 was detected in immersion fixed LS180 human colorectal adenocarcinoma cell line using Mouse Anti-Human/Rat Laminin  $\gamma$ 1 Monoclonal Antibody (Catalog # MAB2139) at 10  $\mu$ g/mL for 3 hours at room temperature. Cells were stained using the NorthernLights™ 557-conjugated Anti-Mouse IgG Secondary Antibody (red; Catalog # NL007) and counterstained with DAPI (blue). Specific staining was localized to cytoplasm. View our protocol for [Fluorescent ICC Staining of Cells on Coverslips](#).

## BACKGROUND

Laminins are heterotrimeric, noncollagenous glycoproteins composed of alpha, beta and gamma chains. Through interactions with integrins, dystroglycan and other receptors, laminins contribute to cell differentiation, cell shape and migration, and maintenance of tissue phenotypes and survival (1). Laminin  $\gamma$ 1, also known as Laminin B2, is the gamma subunit of Laminin-1 (EHS laminin), Laminin-2 (merosin), Laminin-3 (S-laminin), Laminin-4 (S-merosin), Laminin-6 (K-laminin) and Laminin-7 (KS-laminin).
