

Human FCRL4/FcRH4 Antibody

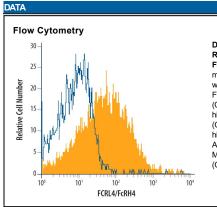

Monoclonal Mouse IgG₁ Clone # 580810 Catalog Number: MAB24262

DESCRIPTION	
Species Reactivity	Human
Specificity	Detects human FCRL4/FcRH4 in direct ELISAs. In direct ELISAs, no cross-reactivity with recombinant human FCRL1 is observed.
Source	Monoclonal Mouse IgG ₁ Clone # 580810
Purification	Protein A or G purified from hybridoma culture supernatant
Immunogen	Mouse myeloma cell line NS0-derived recombinant human FCRL4/FcRH4 Gln16-Asp385 Accession # NP_112572
Formulation	Lyophilized from a 0.2 µm filtered solution in PBS and NaCl with Trehalose. See Certificate of Analysis for details. *Small pack size (-SP) is supplied either lyophilized or as a 0.2 µm filtered solution in PBS.

APPLICATIONS

Please Note: Optimal dilutions should be determined by each laboratory for each application. General Protocols are available in the Technical Information section on our website.

	Recommended Sample Concentration
Flow Cytometry	2.5 µg/10 ⁶ cells See Below
CyTOF-ready	Ready to be labeled using established conjugation methods. No BSA or other carrier proteins that could interfere with conjugation.

Detection of FCRL4/FcRH4 in RPMI 8226 Human Cell Line by Flow Cytometry. RPMI 8226 human multiple myeloma cell line was stained with Mouse Anti-Human FCRL4/FcRH4 Monoclonal Antibody (Catalog # MAB24262, filled histogram) or isotype control antibody (Catalog # MAB002, open histogram), followed by Allophycocyanin-conjugated Anti-Mouse IgG Secondary Antibody (Catalog # F0101B).

PREPARATION AND STORAGE

Reconstitution Reconstitute at 0.5 mg/mL in sterile PBS.

Shipping The product is shipped at ambient temperature. Upon receipt, store it immediately at the temperature recommended below.

*Small pack size (-SP) is shipped with polar packs. Upon receipt, store it immediately at -20 to -70 °C

- 12 months from date of receipt, -20 to -70 °C as supplied.
- 1 month, 2 to 8 °C under sterile conditions after reconstitution.
- 6 months, -20 to -70 °C under sterile conditions after reconstitution.

BACKGROUND

Fc receptor-like 4 (FCRL4), also known as FcRH4 and IRTA1, is an Ig superfamily transmembrane protein that shares sequence homology with the classical Fc receptors. FCRL4 is preferentially expressed in B cells and contains three potential ITIM motifs in its cytoplasmic domain. The gene for FCRL4 is localized to the human chromosome 1q21-23 region, a hotspot for translocation events.
