

DESCRIPTION	
Species Reactivity	Human/Mouse
Specificity	Detects mouse Wnt-5a in direct ELISAs and human and mouse Wnt-5a in Western blots. In direct ELISAs, no cross-reactivity with recombinant mouse Wnt-1, 2b, 3a, 4, 5b, 8a, 8b, 9b, 10a, 10b, 11, or 16 is observed.
Source	Monoclonal Rat IgG _{2A} Clone # 442625
Purification	Protein A or G purified from hybridoma culture supernatant
Immunogen	CHO-derived recombinant mouse Wnt-5a Gln38-Lys380 Accession # P22725
Formulation	Lyophilized from a 0.2 µm filtered solution in PBS with Trehalose. See Certificate of Analysis for details. *Small pack size (-SP) is supplied either lyophilized or as a 0.2 µm filtered solution in PBS.

APPLICATIONS		
Please Note: Optimal dilutions should be determined by each laboratory for each application. <i>General Protocols</i> are available in the <i>Technical Information</i> section on our website.		
	Recommended Concentration	Sample
Immunohistochemistry	8-25 µg/mL	See Below
Western Blot	HeLa human cervical epithelial carcinoma cell line and mouse embryo (13 d.p.c.) tissue	

DATA	
<p>Western Blot</p>  <p>Detection of Human and Mouse Wnt-5a by Western Blot. Western blot shows lysates of HeLa human cervical epithelial carcinoma cell line and mouse embryo (13 d.p.c.) tissue. PVDF Membrane was probed with 2 µg/mL of Human/Mouse Wnt-5a Monoclonal Antibody (Catalog # MAB645) followed by HRP-conjugated Anti-Rat IgG Secondary Antibody (Catalog # HAF005). A specific band was detected for Wnt-5a at approximately 49 kDa (as indicated). This experiment was conducted under reducing conditions and using Immunoblot Buffer Group 1.</p>	<p>Immunohistochemistry</p>  <p>Wnt-5a in Mouse Embryo. Wnt-5a was detected in immersion fixed frozen sections of mouse embryo using Human/Mouse Wnt-5a Monoclonal Antibody (Catalog # MAB645) at 10 µg/mL overnight at 4 °C. Tissue was stained using the NorthernLights™ 557-conjugated Anti-Rat IgG Secondary Antibody (orange; Catalog # NL013) and counterstained with DAPI (blue). View our protocol for Fluorescent IHC Staining of Frozen Tissue Sections.</p>

PREPARATION AND STORAGE	
Reconstitution	Reconstitute at 0.5 mg/mL in sterile PBS.
Shipping	The product is shipped at ambient temperature. Upon receipt, store it immediately at the temperature recommended below. *Small pack size (-SP) is shipped with polar packs. Upon receipt, store it immediately at -20 to -70 °C
Stability & Storage	<p>Use a manual defrost freezer and avoid repeated freeze-thaw cycles.</p> <ul style="list-style-type: none"> ● 12 months from date of receipt, -20 to -70 °C as supplied. ● 1 month, 2 to 8 °C under sterile conditions after reconstitution. ● 6 months, -20 to -70 °C under sterile conditions after reconstitution.

BACKGROUND

Wnt proteins are secreted glycoproteins that contain a conserved pattern of 23-24 cysteine residues. Wnts play critical roles in both carcinogenesis and embryonic development for a variety of organisms. Wnts bind to receptors of the Frizzled family, sometimes in conjunction with other membrane-associated proteins such as LRP6 or proteoglycans. Downstream effects of Wnt signaling occur through different intracellular components, depending on which pathway is activated. Three pathways have been characterized: the canonical Wnt/ β -catenin pathway, the Wnt/ Ca^{2+} pathway, and the planar cell polarity (1-2).

Wnt-5a is part of the subgroup of Wnts that are not axis-inducing in *Xenopus* embryos and do not transform C57MG mammary epithelial cells. This subgroup is also implicated in the Wnt/ Ca^{2+} pathway, playing roles in cell movements and cell adhesion (3). This non-canonical Wnt pathway can inhibit canonical Wnt/ β -catenin signaling. In Wnt-5a deficient mouse embryos, β -catenin accumulates in the limb bud suggesting that Wnt-5a normally promotes degradation of β -catenin (4). Likewise, in *Xenopus* embryos Wnt-5a antagonizes the ability of the canonical Wnt subgroup to induce a secondary axis (5). Wnt-5a is implicated in various types of cancer and has complex roles. It acts as a tumor suppressor for mammary, B-cell, colon, and uroepithelial cancer cells but is up-regulated in melanomas, where expression levels correlate with severity of metastasis (3). Furthermore, aberrant Wnt-5a signaling results in other diseases such as rheumatoid arthritis (6). Like other developmental growth factors Wnt-5a has diverse roles in development. They are too numerous to enunciate here, as functions span from early anterior-posterior development and gastrulation movements to maintaining hematopoietic stem cell population, lung morphogenesis, and limb outgrowth. Mature Wnt-5a is a 49 kDa protein that shares 99% amino acid identity in mouse, rat and human.
