

Viral Dengue Virus 2 NS1 Antibody

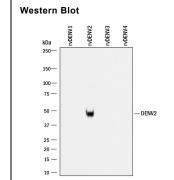

Monoclonal Mouse IgG₁ Clone # 969828 Catalog Number: MAB94391

DESCRIPTION		
Species Reactivity	Viral	
Specificity	Detects recombinant Dengue Virus 2 NS1 protein in direct ELISAs and Western blots. In Direct Elisa and Western Blots, no cross-react with recombinant Dengue Virus 1, 3 and 4 NS1 proteins was observed.	
Source	Monoclonal Mouse IgG ₁ Clone # 969828	
Purification	Protein A or G purified from hybridoma culture supernatant	
Immunogen	Human embryonic kidney cell line HEK293-derived recombinant Dengue Virus 2 NS1 protein Asp1-Ala352 Accession # NP_739584	
Formulation	Lyophilized from a 0.2 µm filtered solution in PBS with Trehalose. See Certificate of Analysis for details. *Small pack size (-SP) is supplied either lyophilized or as a 0.2 µm filtered solution in PBS.	

Please Note: Optimal dilutions should be determined by each laboratory for each application. General Protocols are available in the Technical Information section on our website.

	Recommended Concentration	Sample
Western Blot	5 μg/mL	See Below

DATA

Detection of Dengue Virus 2 NS1 by Western Blot. Western blot shows recombinant Dengue Virus (DENV) 1 recombinant DENV2, recombinant DENV3, and recombinant DENV4. PVDF membrane was probed with 5 μ g/mL of Mouse Anti-Viral Dengue Virus 2 NS1 Monoclonal Antibody (Catalog # MAB94391) followed by HRPconjugated Anti-Mouse IgG Secondary Antibody (Catalog # HAF018). A specific band was detected for Dengue Virus 2 NS1 at approximately 50 kDa (as indicated). This experiment was conducted under reducing conditions and using Immunoblot Buffer Group 1.

PREPARATION AND STORAGE

Reconstitution	Reconstitute at 0.5 mg/mL in sterile PBS.		
Chinning	The product is chinned at ambient temperature. Upon receipt, store it immediately at the temperature		

*Small pack size (-SP) is shipped with polar packs. Upon receipt, store it immediately at -20 to -70 °C

Stability & Storage Use a manual defrost freezer and avoid repeated freeze-thaw cycles.

- 12 months from date of receipt, -20 to -70 °C as supplied.
- 1 month, 2 to 8 °C under sterile conditions after reconstitution.

6 months, -20 to -70 °C under sterile conditions after reconstitution.

Dengue virus (DENV), the cause of Dengue fever, is a single positive-stranded RNA virus of the family Flaviviridae, genus Flavivirus. 5 closely related but antigenically distinct serotypes of the virus have been found: DENV-1, DENV-2, DENV-3, DENV-4 and DENV-5. DENV has a genome of about 11,000 bases, encoding a single large polyprotein that is subsequently cleaved into several structural and non-structural peptides. The polyprotein is divided into three structural proteins, C, prM, E, seven non-structural proteins, NS1, NS2a, NS2b, NS3, NS4a, NS4b, NS5, and short non-coding regions on both the 5' and 3' ends. DENV nonstructural protein-1 (NS1) is a secreted glycoprotein that is absent from viral particles but accumulates in the supernatant and on the plasma membrane of cells during infection.
