Description:

Haloperidol hydrochloride is a dopamine antagonist with selectivity for D_2-like receptors (K_i values are 1.2, ~ 7, 2.3, ~ 80 and ~ 100 nM for D_2, D_3, D_4, D_1 and D_5 receptors respectively). Subtype-selective NMDA antagonist. Identified as targeting human host proteins that interact with SARS-CoV-2.

Stability and Solubility Advice:

Some solutions can be difficult to obtain and can be encouraged by rapid stirring, sonication or gentle warming (in a 45-60°C water bath).

Information concerning product stability, particularly in solution, has rarely been reported and in most cases we can only offer a general guide. *Unless contradicted by product-specific protocols or instructions, our standard recommendations apply:

SOLIDS: Provided storage is as stated on the product label and the vial is kept tightly sealed, the product can be stored for up to 6 months from date of receipt.

SOLUTIONS: We recommend that stock solutions, once prepared, are stored aliquoted in tightly sealed vials at -20°C or below and used within 1 month. Wherever possible solutions should be made up and used on the same day.
