

Certificate of Analysis

www.tocris.com

Product Name: WKYMMv
CAS Number: 187986-17-0

Catalog No.: 1800 **Batch No.:** 16

1. PHYSICAL AND CHEMICAL PROPERTIES

Batch Molecular Formula: C₄₁H₆₁N₉O₇S₂
Batch Molecular Weight: 856.11
Physical Appearance: White lyophilised solid
Counter Ion: TFA
Solubility: Soluble to 2 mg/ml in water
Storage: Store at -20°C
Peptide Sequence: Trp-Lys-Tyr-Met-Val-D-Met-NH₂

2. ANALYTICAL DATA

HPLC: Shows 97.8% purity
Mass Spectrum: Consistent with structure

3. AMINO ACID ANALYSIS DATA

Amino Acid	Theoretical	Actual	Amino Acid	Theoretical	Actual
Ala			Lys	1.00	0.96
Arg			Met	2.00	2.02
Asx			Phe		
Cys			Pro		
Glx			Ser		
Gly			Thr		
His			Trp	1.00	Not Detected
Ile			Tyr	1.00	1.03
Leu			Val	1.00	0.99

Product Name: WKYMVm
CAS Number: 187986-17-0**Catalog No.:** 1800 **Batch No.:** 16**Description:**

WKYMVm is a selective agonist for the formyl peptide receptors FPR1, FPR2 (EC₅₀ = 75 pM) and FPR3 (EC₅₀ = 3 nM), expressed on immune cells. Induces Ca²⁺ mobilization and superoxide production in, and chemotactic migration of, monocytes and neutrophils. Also promotes monocyte survival through a PKC-, PI 3-kinase- and Akt-dependent pathway.

Physical and Chemical Properties:

Batch Molecular Formula: C₄₁H₆₁N₉O₇S₂
Batch Molecular Weight: 856.11
Physical Appearance: White lyophilised solid

Peptide Sequence:Trp-Lys-Tyr-Met-Val-D-Met-NH₂**Storage:** Store at -20°C**Solubility & Usage Info:**

Soluble to 2 mg/ml in water

This product is supplied in lyophilized form. It may appear as a solid, gel or film and be very hard to visualize. Solutions should be made by adding solvent directly to the vial. The vial should then be vortexed vigorously to ensure the product has completely dissolved.

Counter Ion: TFA**Stability and Solubility Advice:**

Some solutions can be difficult to obtain and can be encouraged by rapid stirring, sonication or gentle warming (in a 45-60°C water bath).

Peptides in solution are much less stable than in lyophilized form. This is especially true for peptides whose sequences contain amino acids such as Cys, Met, Trp, Asn, Gln, and N-terminal Glu.

Therefore we recommend storing peptides in solution for as short a time as possible. Avoid repeated freeze thaw cycles by dividing the peptide solution into aliquots and storing the aliquots at -20°C. Any portion of an aliquot unused after thawing should be discarded.

Peptides stored in solution can occasionally be susceptible to bacterial degradation. We recommend using sterile solutions or passing the peptide solution through a 0.2 µm filter to remove potential bacterial contamination whenever possible.
