

## Certificate of Analysis

[www.tocris.com](http://www.tocris.com)

**Product Name:** RC 160  
**CAS Number:** 103222-11-3

**Catalog No.:** 3139 **Batch No.:** 2

### 1. PHYSICAL AND CHEMICAL PROPERTIES

**Batch Molecular Formula:** C<sub>57</sub>H<sub>70</sub>N<sub>12</sub>O<sub>9</sub>S<sub>2</sub>  
**Batch Molecular Weight:** 1131.37  
**Physical Appearance:** White solid  
**Net Peptide Content:** 90.5%  
**Counter Ion:** Acetate  
**Solubility:** Soluble to 0.20 mg/ml in water  
**Storage:** Desiccate at -20°C  
**Peptide Sequence:**  D-Phe-Cys-Tyr-D-Trp-Lys-Val-Cys-Trp-NH<sub>2</sub>

### 2. ANALYTICAL DATA

**HPLC:** Shows 98.6% purity  
**Mass Spectrum:** Consistent with structure

**Product Name:** RC 160

**Catalog No.:** 3139

**Batch No.:** 2

CAS Number: 103222-11-3

**Description:**

RC 160 is a cyclic octapeptide somatostatin analog ( $K_i$  values are 0.7, 5.4, 30.9, 45 and > 1000 nM for sst<sub>5</sub>, sst<sub>2</sub>, sst<sub>3</sub>, sst<sub>4</sub> and sst<sub>1</sub> receptors respectively). More metabolically stable than somatostatin (Cat. No. 1157). Inhibits growth hormone release in vivo.

**Physical and Chemical Properties:**

Batch Molecular Formula: C<sub>57</sub>H<sub>70</sub>N<sub>12</sub>O<sub>9</sub>S<sub>2</sub>

Batch Molecular Weight: 1131.37

Physical Appearance: White solid

**Peptide Sequence:**

**Storage:** Desiccate at -20°C

**Solubility & Usage Info:**

Soluble to 0.20 mg/ml in water

This product is supplied as a lyophilized solid and may be very hard to visualize. Solutions should be made by adding solvent directly to the vial. The vial should then be vortexed vigorously to ensure the product has completely dissolved.

**Net Peptide Content:** 90.5% (Remaining weight made up of counterions and residual water).

**Counter Ion:** Acetate

**Stability and Solubility Advice:**

Some solutions can be difficult to obtain and can be encouraged by rapid stirring, sonication or gentle warming (in a 45-60°C water bath).

Peptides in solution are much less stable than in lyophilized form. This is especially true for peptides whose sequences contain amino acids such as Cys, Met, Trp, Asn, Gln, and N-terminal Glu.

Therefore we recommend storing peptides in solution for as short a time as possible. Avoid repeated freeze thaw cycles by dividing the peptide solution into aliquots and storing the aliquots at -20°C. Any portion of an aliquot unused after thawing should be discarded.

Peptides stored in solution can occasionally be susceptible to bacterial degradation. We recommend using sterile solutions or passing the peptide solution through a 0.2 µm filter to remove potential bacterial contamination whenever possible.
