Product Information

Product Name: CART (55-102) (rat)

CAS Number: 209615-79-2

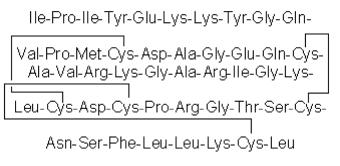

Description:

CART (55-102) (rat) is a cocaine- and amphetamine-regulated transcript (CART) with potent appetite-suppressing activity. Satiety factor; inhibits normal and starvation-induced feeding. Closely related to the actions of leptin and neuropeptide Y; blocks the neuropeptide Y-induced feeding response. Induces anxiety and stress behavior in rodents.

Physical and Chemical Properties:

Batch Molecular Formula: C₂₂₆H₃₆₇N₆₅O₆₅S₇ Batch Molecular Weight: 5259.21 Physical Appearance: White lyophilised solid

Peptide Sequence:

Storage: Store at -20°C

Solubility & Usage Info:

Soluble to 1 mg/ml in water

This product is supplied in lyophilized form. It may appear as a solid, gel or film and be very hard to visualize. Solutions should be made by adding solvent directly to the vial. The vial should then be vortexed vigorously to ensure the product has completely dissolved.

Counter Ion: TFA

Stability and Solubility Advice:

Some solutions can be difficult to obtain and can be encouraged by rapid stirring, sonication or gentle warming (in a 45-60°C water bath).

Peptides in solution are much less stable than in lyophilized form. This is especially true for peptides whose sequences contain amino acids such Cys, Met,Trp, Asn, Gln, and N-terminal Glu.

Therefore we recommend storing peptides in solution for as short a time as possible. Avoid repeated freeze thaw cycles by dividing the peptide solution into aliquots and storing the aliquots at -20°C. Any portion of an aliquot unused after thawing should be discarded.

Peptides stored in solution can occasionally be susceptible to bacterial degradation. We recommend using sterile solutions or passing the peptide solution through a 0.2 μ m filter to remove potential bacterial contamination whenever possible.
