Psalmotoxin 1 Product Name: 316808-68-1 CAS Number:

Catalog No.: 5042

Batch No.: 9

1. PHYSICAL AND CHEMICAL PROPERTIES

Batch Molecular Formula: Batch Molecular Weight: Physical Appearance: Counter Ion: Solubility: Storage: **Peptide Sequence:**

C200H312N62O57S6 4689.41 White solid TFA Soluble to 2 mg/ml in water Store at -20°C Glu-Asp-Cys-Ile-Pro-Lys-Trp-Lys-Gly-Val-Asn-Arg-His-Gly-Asp-Cys Glu Leu-Glu-Cys-Trp-Lys-Arg-Arg-Arg-Ser-Phe-Glu-Val-Cys-Val-Pro-Lys-Thr-Pro-Lys-Thr

2. ANALYTICAL DATA

HPLC: Mass Spectrum:

Shows 98.1% purity Consistent with structure

Caution - Not Fully Tested • Research Use Only • Not For Human or Veterinary Use

Product Name: Psalmotoxin 1

CAS Number: 316808-68-1

Description:

Psalmotoxin 1 is a potent and selective acid-sensing ion channel 1a (ASIC1a) blocker ($IC_{50} = 0.9$ nM). Displays no effect at ASIC1b, ASIC2a, ASIC3, heteromeric ASIC channels, ENaC and K_V2.1/2.2/4.2/4.3 channels expressed in oocytes, at concentrations up to 100 nM. Displays potent analgesic properties against thermal, mechanical, chemical, inflammatory and neuropathic pain in rodents.

Physical and Chemical Properties:

Batch Molecular Formula: $C_{200}H_{312}N_{62}O_{57}S_6$ Batch Molecular Weight: 4689.41 Physical Appearance: White solid

Peptide Sequence:

Glu-Asp-Cys-lle-Pro-Lys-Trp-Lys-Gly-Cys-

Val-Asn-Arg-His-Gly-Asp-Cys-Cys-Glu-Gly-

Leu-Glu-Cys-Trp-Lys-Arg-Arg-Arg-Ser-Phe-

Glu-Val-Cys-Val-Pro-Lys-Thr-Pro-Lys-Thr

Storage: Store at -20°C

Solubility & Usage Info:

Soluble to 2 mg/ml in water

This product is supplied in lyophilized form. It may appear as a solid, gel or film and be very hard to visualize. Solutions should be made by adding solvent directly to the vial. The vial should then be vortexed vigorously to ensure the product has completely dissolved.

Counter Ion: TFA

Stability and Solubility Advice:

Some solutions can be difficult to obtain and can be encouraged by rapid stirring, sonication or gentle warming (in a 45-60°C water bath).

Peptides in solution are much less stable than in lyophilized form. This is especially true for peptides whose sequences contain amino acids such Cys, Met,Trp, Asn, Gln, and N-terminal Glu.

Therefore we recommend storing peptides in solution for as short a time as possible. Avoid repeated freeze thaw cycles by dividing the peptide solution into aliquots and storing the aliquots at -20°C. Any portion of an aliquot unused after thawing should be discarded.

Peptides stored in solution can occasionally be susceptible to bacterial degradation. We recommend using sterile solutions or passing the peptide solution through a 0.2 μ m filter to remove potential bacterial contamination whenever possible.
