

**Product Name:** PMX 205  
CAS Number: 514814-49-4

**Catalog No.:** 5196 **Batch No.:** 11

**1. PHYSICAL AND CHEMICAL PROPERTIES**

**Batch Molecular Formula:** C<sub>45</sub>H<sub>62</sub>N<sub>10</sub>O<sub>6</sub>  
**Batch Molecular Weight:** 839.05  
**Physical Appearance:** White lyophilised solid  
**Counter Ion:** TFA  
**Solubility:** Soluble to 1 mg/ml in water with sonication  
**Storage:** Store at -20°C  
**Peptide Sequence:** Cyclo[N<sup>2</sup>-(1-Oxo-3-phenylpropyl)-Orn-Pro-D-Cha-Trp-Arg]

**2. ANALYTICAL DATA**

**HPLC:** Shows 98.3% purity  
**Mass Spectrum:** Consistent with structure

**3. AMINO ACID ANALYSIS DATA**

Amino Acid Theoretical		Actual		Amino Acid Theoretical		Actual	
Ala				Lys			
Arg	1.00	0.96		Met			
Asx				Phe			
Cys				Pro	1.00	1.04	
Glx				Ser			
Gly				Thr			
His				Trp	1.00	Detected	
Ile				Tyr			
Leu				Val			

Caution - Not Fully Tested • Research Use Only • Not For Human or Veterinary Use

**Product Name:** PMX 205

**Catalog No.:** 5196

**Batch No.:** 11

CAS Number: 514814-49-4

**Description:**

PMX 205 is a potent C5a receptor peptide antagonist (IC<sub>50</sub> = 31 nM). Ameliorates experimentally-induced colon inflammation in mice. Reduces fibrillar amyloid deposits, decreases hyperphosphorylated tau levels and rescues cognitive function in a mouse model of Alzheimer's disease. Also improves hindlimb grip strength and slows disease progression in the hSOD1<sup>G93A</sup> mouse model of amyotrophic lateral sclerosis. Orally active and brain penetrant.

**Physical and Chemical Properties:**

Batch Molecular Formula: C<sub>45</sub>H<sub>62</sub>N<sub>10</sub>O<sub>6</sub>

Batch Molecular Weight: 839.05

Physical Appearance: White lyophilised solid

**Peptide Sequence:**

Cyclo[N<sup>2</sup>-(1-Oxo-3-phenylpropyl)-Orn-Pro-D-Cha-Trp-Arg]

**Storage:** Store at -20°C

**Solubility & Usage Info:**

Soluble to 1 mg/ml in water with sonication

This product is supplied as a lyophilised solid and may be very hard to visualise. Solutions should be made by adding solvent directly to the vial. The vial should then be vortexed vigorously to ensure the product has completely dissolved.

**Counter Ion:** TFA

**Stability and Solubility Advice:**

Some solutions can be difficult to obtain and can be encouraged by rapid stirring, sonication or gentle warming (in a 45-60°C water bath).

Peptides in solution are much less stable than in lyophilized form. This is especially true for peptides whose sequences contain amino acids such as Cys, Met, Trp, Asn, Gln, and N-terminal Glu.

Therefore we recommend storing peptides in solution for as short a time as possible. Avoid repeated freeze thaw cycles by dividing the peptide solution into aliquots and storing the aliquots at -20°C. Any portion of an aliquot unused after thawing should be discarded.

Peptides stored in solution can occasionally be susceptible to bacterial degradation. We recommend using sterile solutions or passing the peptide solution through a 0.2 µm filter to remove potential bacterial contamination whenever possible.
