Description:

DMNPE-4 AM-caged-calcium is a calcium cage. In the presence of calcium, the compound will chelate and cage calcium (K_d values are 48 and 19 nM at pH 7.2 and 7.4, respectively; K_d after uncaging = 2 mM). DMNPE-4 AM-caged-calcium is selective for Ca^{2+} over Mg^{2+} ($K_d = 10$ mM). Rapid and efficient calcium release occurs upon photolysis at 350 nm. It can also be used for two-photon uncaging. Extinction coefficient of $5120 M^{-1} cm^{-1}$, quantum yield 0.09. Cell permeable.

Stability and Solubility Advice:

Some solutions can be difficult to obtain and can be encouraged by rapid stirring, sonication or gentle warming (in a $45-60^{\circ}C$ water bath).

Information concerning product stability, particularly in solution, has rarely been reported and in most cases we can only offer a general guide. Our standard recommendations are:

SOLIDS: Provided storage is as stated on the product label and the vial is kept tightly sealed, the product can be stored for up to 6 months from date of receipt.

SOLUTIONS: We recommend that stock solutions, once prepared, are stored aliquoted in tightly sealed vials at $-20^{\circ}C$ or below and used within 1 month. Wherever possible solutions should be made up and used on the same day.
