Description:

TM 5441 is a plasminogen activator inhibitor-1 (PAI-1) inhibitor ($IC_{50} = 3.58 - 60.3 \mu M$). Increases apoptosis in human cancer cell lines. Reduces senescence and increases lifespan in mouse models of ageing (kl/kl). Inhibits L-NAME (Cat.No. 0665) induced systolic blood pressure increases, telomere length reduction and cardiac hypertrophy in mice. Renoprotective. Orally bioavailable.

Stability and Solubility Advice:

Some solutions can be difficult to obtain and can be encouraged by rapid stirring, sonication or gentle warming (in a 45-60°C water bath).

Information concerning product stability, particularly in solution, has rarely been reported and in most cases we can only offer a general guide. Our standard recommendations are:

SOLIDS: Provided storage is as stated on the product label and the vial is kept tightly sealed, the product can be stored for up to 6 months from date of receipt.

SOLUTIONS: We recommend that stock solutions, once prepared, are stored aliquoted in tightly sealed vials at -20°C or below and used within 1 month. Wherever possible solutions should be made up and used on the same day.
