

Product Name: QWF
CAS Number: 126088-82-2

Catalog No.: 6642 **Batch No.:** 8

1. PHYSICAL AND CHEMICAL PROPERTIES

Batch Molecular Formula: C₃₈H₄₃N₅O₈
Batch Molecular Weight: 697.78
Physical Appearance: White lyophilised solid
Counter Ion: N/A
Solubility: Soluble to 10 mg/ml in DMSO
Storage: Store at -20°C
Peptide Sequence: Boc-Gln-D-Trp(Formyl)-Phe-OBzl

2. ANALYTICAL DATA

HPLC: Shows 98.8% purity
Mass Spectrum: Consistent with structure

3. AMINO ACID ANALYSIS DATA

Amino Acid Theoretical		Actual		Amino Acid Theoretical		Actual	
Ala				Lys			
Arg				Met			
Asx				Phe	1.00		1.02
Cys				Pro			
Glx	1.00		0.98	Ser			
Gly				Thr			
His				Trp	1.00		Detected
Ile				Tyr			
Leu				Val			

Caution - Not Fully Tested • Research Use Only • Not For Human or Veterinary Use

Product Name: QWF

Catalog No.: 6642

8

CAS Number: 126088-82-2

Description:

QWF is a tripeptide substance P (SP) antagonist (IC₅₀ = 90 μM). Also inhibits binding of SP to Mas-related GPCR (MRGPR) X2. Inhibits SP-induced IgE-independent degranulation of mast cells in vitro. Inhibits compound 48/80-induced MRGPRX2 activation and scratching in mice in vivo. For more information about how QWF may be used, see our protocol: 3D Culture of Lung Alveolar Cells

Physical and Chemical Properties:

Batch Molecular Formula: C₃₈H₄₃N₅O₈

Batch Molecular Weight: 697.78

Physical Appearance: White lyophilised solid

Peptide Sequence:

Boc-Gln-D-Trp(Formyl)-Phe-OBzl

Storage: Store at -20°C

Solubility & Usage Info:

Soluble to 10 mg/ml in DMSO

This product is supplied in gross weight.

Counter Ion: N/A

Stability and Solubility Advice:

Some solutions can be difficult to obtain and can be encouraged by rapid stirring, sonication or gentle warming (in a 45-60°C water bath).

Peptides in solution are much less stable than in lyophilized form. This is especially true for peptides whose sequences contain amino acids such as Cys, Met, Trp, Asn, Gln, and N-terminal Glu.

Therefore we recommend storing peptides in solution for as short a time as possible. Avoid repeated freeze thaw cycles by dividing the peptide solution into aliquots and storing the aliquots at -20°C. Any portion of an aliquot unused after thawing should be discarded.

Peptides stored in solution can occasionally be susceptible to bacterial degradation. We recommend using sterile solutions or passing the peptide solution through a 0.2 μm filter to remove potential bacterial contamination whenever possible.
