Description:

HM Janelia Fluor[®] 526, SE is a fluorogenic spontaneously blinking green-emitting dye; hydroxymethyl derivative of JF526. Suitable for super-resolution imaging including dSTORM, STED and single-molecule localization spectroscopy (SMLSM). The spontaneous blinking properties of HM Janelia Fluor[®] 526, avoids the requirement for strongly reducing dSTORM buffers. Also suitable for conventional confocal microscopy and live cell imaging. NHS ester can be converted to relevant substrate for use in self-labeling tag systems, e.g. HaloTag[®] and SNAP-tag[®]. To measure the absorbance spectrum of this dye we recommend the following solvent:.... Please see product specific page on www.tocris.com for full description.

Stability and Solubility Advice:

Some solutions can be difficult to obtain and can be encouraged by rapid stirring, sonication or gentle warming (in a 45-60°C water bath).

Information concerning product stability, particularly in solution, has rarely been reported and in most cases we can only offer a general guide. Our standard recommendations are:

SOLIDS: Provided storage is as stated on the product label and the vial is kept tightly sealed, the product can be stored for up to 6 months from date of receipt.

SOLUTIONS: We recommend that stock solutions, once prepared, are stored aliquoted in tightly sealed vials at -20°C or below and used within 1 month. Wherever possible solutions should be made up and used on the same day.
