IUPAC Name: (S)-N-(2-(2-(2-(2-(4-(4-Chlorophenyl)-2,3,9-trimethyl-6H-thieno[3,2-f][1,2,4]triazolo[4,3-a][1,4]diazepin-6-yl)acetamido)ethoxy)ethoxy)ethyl)-6-(2,5-dioxo-2,5-dihydro-1H-pyrrol-1-yl)hexanamide

Description:

(+)-JQ1 maleimide is a probe that comprises a cysteine-reactive maleimide connected to the BRD4 ligand, JQ1, via a PEG2 linker. It can be used in the COFFEE method (COvalent Functionalization Followed by E3 Electroporation) in which (+)-JQ1 maleimide is covalently attached to VHL followed by electroporation into live cells. The E3 ligase forms a complex with BRD4 intracellularly and induces its degradation.

Stability and Solubility Advice:

Some solutions can be difficult to obtain and can be encouraged by rapid stirring, sonication or gentle warming (in a 45-60°C water bath).

Information concerning product stability, particularly in solution, has rarely been reported and in most cases we can only offer a general guide. Our standard recommendations are:

SOLIDS: Provided storage is as stated on the product label and the vial is kept tightly sealed, the product can be stored for up to 6 months from date of receipt.

SOLUTIONS: We recommend that stock solutions, once prepared, are stored aliquoted in tightly sealed vials at -20°C or below and used within 1 month. Wherever possible solutions should be made up and used on the same day.
