CAS Number: 2743427-26-9

IUPAC Name: (2S,4R)-4-Hydroxy-1-((S)-2-(2-(4-(3-methoxy-4-((4-((2-(methylcarbamoyl)phenyl)amino)-5-(trifluoromethyl)pyridin-2-yl)amino)phenyl)piperazin-1-yl)acetamido)-3,3-dimethylbutanoyl)-N-((S)-1-(4-(4-methylthiazol-5-yl)phenyl)ethyl)pyrrolidine-2-carboxamide

Description:

GSK 215 is a potent and selective focal adhesion kinase (FAK) Degradator (PROTAC[®]; pDC₅₀ = 8.4, last for 96 h). Comprises the FAK inhibitor, PND 1186 (Cat. No. 6891), joined by a linker to a VHL E3 ligase ligand. Kinome binding (KinoBead profiling) shows GSK 215 (at 10 nM) has high selectivity for the FAK kinase domain. GSK 215 inhibits cell proliferation in MCF-7 and A549 cells and suppresses A549 cell motility in a wound scratch model system. In CD1 mice, GSK 215 injection induces rapid and profound degradation of FAK in liver (D_{max} = 85% at 18h).

Stability and Solubility Advice:

Some solutions can be difficult to obtain and can be encouraged by rapid stirring, sonication or gentle warming (in a 45-60°C water bath).

Information concerning product stability, particularly in solution, has rarely been reported and in most cases we can only offer a general guide. Our standard recommendations are:

SOLIDS: Provided storage is as stated on the product label and the vial is kept tightly sealed, the product can be stored for up to 6 months from date of receipt.

SOLUTIONS: We recommend that stock solutions, once prepared, are stored aliquoted in tightly sealed vials at -20°C or below and used within 1 month. Wherever possible solutions should be made up and used on the same day.
