**Description:**

HDAC4 CHDI Degrader 11 is a potent and selective HDAC4 Degrader (PROTAC®) (DC<sub>50</sub> values are 4 and 6 nM in Jurkat E6-1 and Jurkat cells respectively). Comprises the class IIa HDAC inhibitor trifluoromethyloxadiazole joined by a linker to a ligand for Von Hippel-Lindau (VHL) protein. In a mouse cell model of Huntington's disease, HDAC4 CHDI Degrader 11 potently degrades HDAC4 (DC<sub>50</sub> = 1nM). Can be used with P-glycoprotein inhibitor Elacridar (Cat. No. 4646) for more effective degradation in neuroblastoma cell lines. HDAC4 antibody validated for Simple Western™ (automated Western) instruments also available: Catalog # NBP2-22151.PR... This product is supplied in lyophilized form. It may appear as a solid, gel or film and be very hard to visualize. Solutions should be made by adding solvent directly to the vial. The vial should then be vortexed vigorously to ensure the product has completely dissolved.

**Stability and Solubility Advice:**

Some solutions can be difficult to obtain and can be encouraged by rapid stirring, sonication or gentle warming (in a 45-60°C water bath).

Information concerning product stability, particularly in solution, has rarely been reported and in most cases we can only offer a general guide. \*Unless contradicted by product-specific protocols or instructions, our standard recommendations apply:

**SOLIDS:** Provided storage is as stated on the product label and the vial is kept tightly sealed, the product can be stored for up to 6 months from date of receipt.

**SOLUTIONS:** We recommend that stock solutions, once prepared, are stored aliquoted in tightly sealed vials at -20°C or below and used within 1 month. Wherever possible solutions should be made up and used on the same day.
