Immunohistochemistry-Paraffin: TRAF-4 Antibody [NB100-56177] - Formalin-fixed, paraffin embedded, normal human mammary epithelial tissue using the antibody. A-C: Strong TRAF4 staining is seen in the luminal epithelial cells of the interlobular terminal ducts (acini). However, there is absence of TRAF4 immunostaining in the myoepithelial cells along the basement membrane. B and C: higher magnifications of A. Data courtesy of Krajewska et al.

Immunoprecipitation: TRAF-4 Antibody [NB100-56177] - The NB100-56177 TRAF4 antibody specifically immunoprecipitates TRAF4. Top: TRAFs 2,3,4,5, and 6 were in vitro translated in the presence of 35S-methionine, and immunoprecipitated using the TRAF4 antibody. The TRAF4 antibody immunoprecipitated only TRAF4 and did not recognize TRAFs 2, 3, 5, or 6. A reticulocyte primed with an empty pcDNA plasmid was used as a negative control. Bottom: SDS-PAGE visualization of the in vitro translated TRAFs. Data courtesy of Krajewska et al.

Details:

1. IP (Fig 2): The TRAF4 antibody specifically immunoprecipitated in vitro translated human TRAF4, but did not precipitated in vitro translated TRAFs 2, 3, 5, or 6. This validated the specificity of the TRAF4 antibody.
