Images

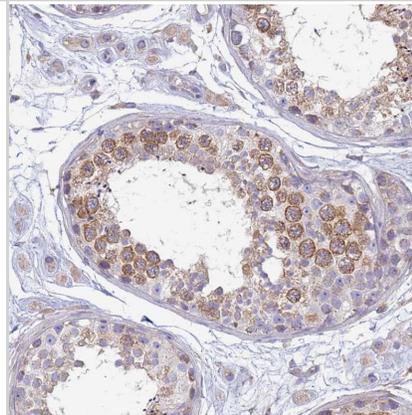

Immunohistochemistry-Paraffin: EEA1 Antibody [NBP1-91860] - Staining of human rectum shows moderate cytoplasmic positivity in glandular cells.

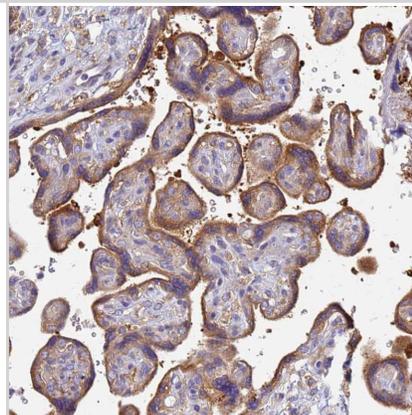

Staining of human cerebral cortex shows strong cytoplasmic positivity in neurons.

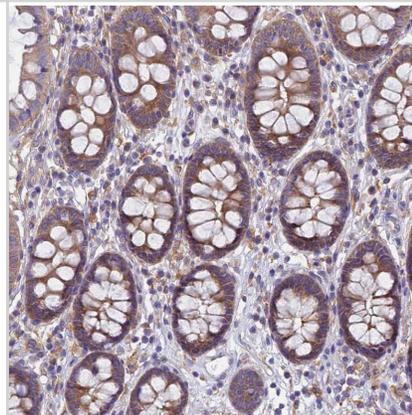

Staining of human testis shows strong cytoplasmic positivity in cells in seminiferous ducts.

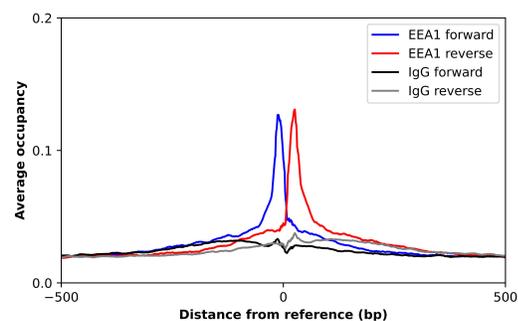

Staining of human placenta shows strong cytoplasmic positivity in trophoblastic cells.

Staining of human colon shows strong cytoplasmic positivity in glandular cells.

ChIP-Exo-Seq composite graph for Anti-EEA1 tested in K562 cells. Strand-specific reads (blue: forward, red: reverse) and IgG controls (black: forward, grey: reverse) are plotted against the distance from a composite set of reference binding sites. The antibody exhibits robust target enrichment compared to a non-specific IgG control and precisely reveals its structural organization around the binding site. Data generated by Prof. B. F. Pugh's Lab at Cornell University.
