Images

Western Blot: S-arrestin Antibody (S128) [NBP2-25161] - Blot of bovine retinal extracts. The antibody stains a band corresponding to S-arrestin at about 48 kDa.

Immunocytochemistry/Immunofluorescence: S-arrestin Antibody (S128) [NBP2-25161] - Confocal image of a pig retina stained with NBP2-25161 (green). S-arrestin is most abundant in the outer segments (OS) and inner surface of the outer nuclear layer (ONL), and can be used to identify components of rod photoreceptor cells. (Cone photoreceptors have a different arrestin isotype). Other retinal layers are inner segments (IS), outer plexiform layer (OPL), inner nuclear layer (INL) and inner plexiform layer (IPL). The red stain is Fox2, an RNA binding nuclear protein related to Fox3/NeuN, which stains nuclei of horizontal neurons and some other neurons in the INL and IPL. Nuclear DNA was revealed with DAPI (blue).
