Images

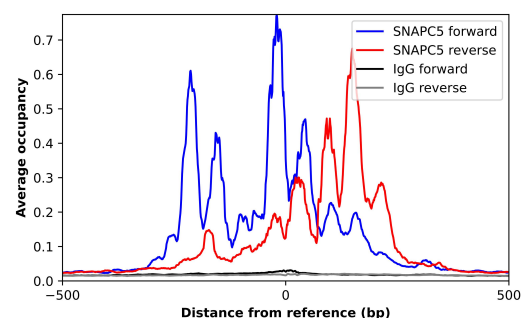

Immunocytochemistry/Immunofluorescence: SNAPC5 Antibody [NBP2-47267] - Immunofluorescent staining of human cell line A549 shows localization to nucleus & nucleoli.

Immunohistochemistry: SNAPC5 Antibody [NBP2-47267] - Staining of human kidney shows strong cytoplasmic positivity in cells in tubules.

ChIP-Exo-Seq composite graph for Anti-SNAPC5 tested in K562 cells. Strand-specific reads (blue: forward, red: reverse) and IgG controls (black: forward, grey: reverse) are plotted against the distance from a composite set of reference binding sites. The antibody exhibits robust target enrichment compared to a non-specific IgG control and precisely reveals its structural organization around the binding site. Data generated by Prof. B. F. Pugh's Lab at Cornell University.
