Staining of human testis shows strong nuclear positivity in cells in seminiferous ducts.

Immunohistochemistry-Paraffin: ZNF683 Antibody [NBP2-48569] - Staining of human cerebral cortex shows strong nuclear positivity in neuronal cells.

Staining of human rectum shows strong nuclear positivity in glandular cells.

Staining of human liver shows no positivity in hepatocytes as expected.

ChIP-Exo-Seq composite graph for Anti-ZNF683 tested in K562 cells. Strand-specific reads (blue: forward, red: reverse) and IgG controls (black: forward, grey: reverse) are plotted against the distance from a composite set of reference binding sites. The antibody exhibits robust target enrichment compared to a non-specific IgG control and precisely reveals its structural organization around the binding site. Data generated by Prof. B. F. Pugh's Lab at Cornell University.
