Application Notes	Please note that of the optimal antibody amount per IP should be determined by the end-user. We recommend testing 1-10 ug per IP.

Images

Chromatin Immunoprecipitation: RFXAP Antibody [NBP3-18683] - Figure 1 ChIP results obtained with the antibody directed against RFXAP ChIP assays were performed using NALM cells (a cell line derived from human pre-B leukemia), the antibody against RFXAP and optimized primer sets for PCR. Sheared chromatin from 2 million cells and respectively 5 and 7 ug of antibody were used per ChIP experiment. An anti-flag antibody (lane 2) was used as negative IP control. Figure 1 shows the result of the end-point PCR with primers for HLA_DRA, used as positive control (lower panel) and for HLA_DOB, used as a negative PCR control (upper panel).
